

Security concept

Christian S. Föttinger, MSc.

**Administrative dept. for Informationsecurity of
Bavarian Universities**

Issues

Complicated in
daily business

knowledge

Time
consuming

- Improvement of authentication mechanism
- Broaden the knowledge for encryption

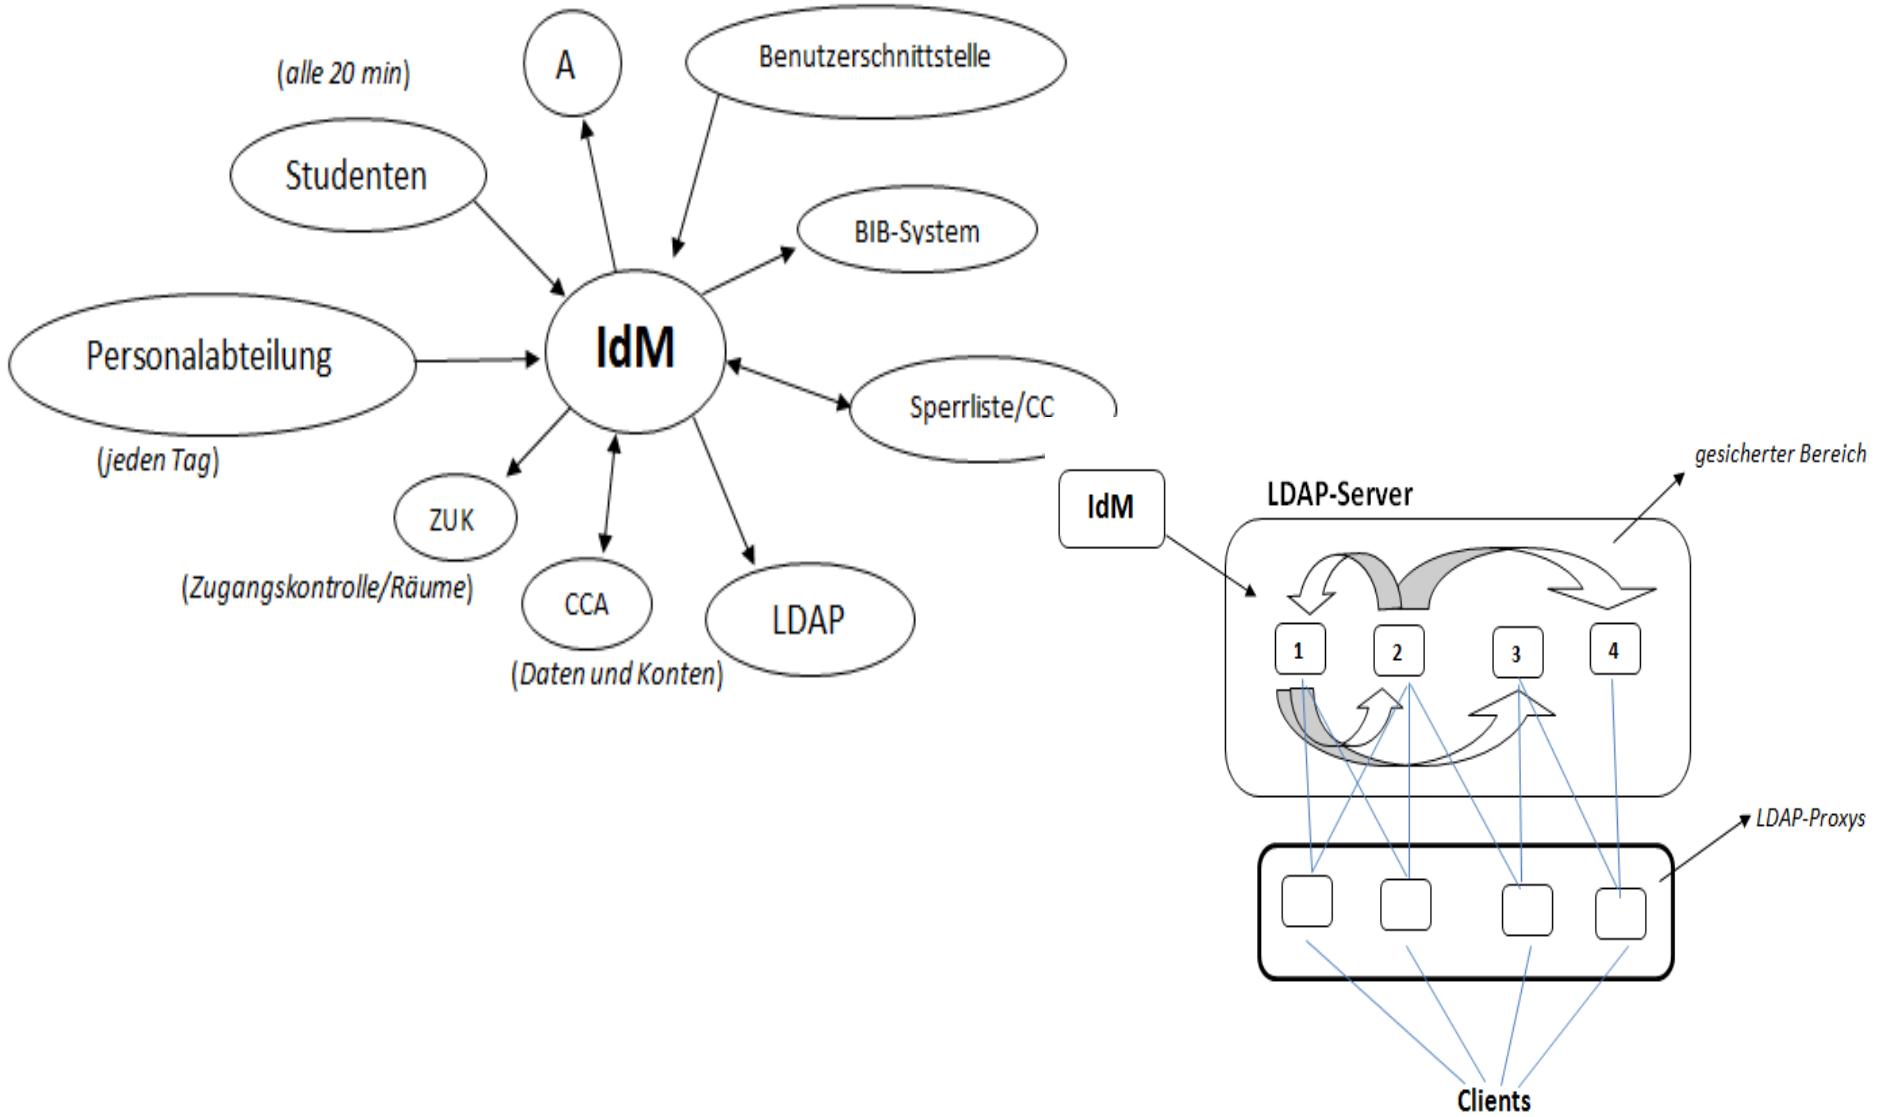

**Alternative solutions for
UserID / Password**

Who needs additional protection

2nd Factor solutions

- OTP
 - TAN List
 - Hardware Token
 - Software Token
 - SmartCard
- Biometric
 - Iris (Mobilphone)
 - Fingerprint

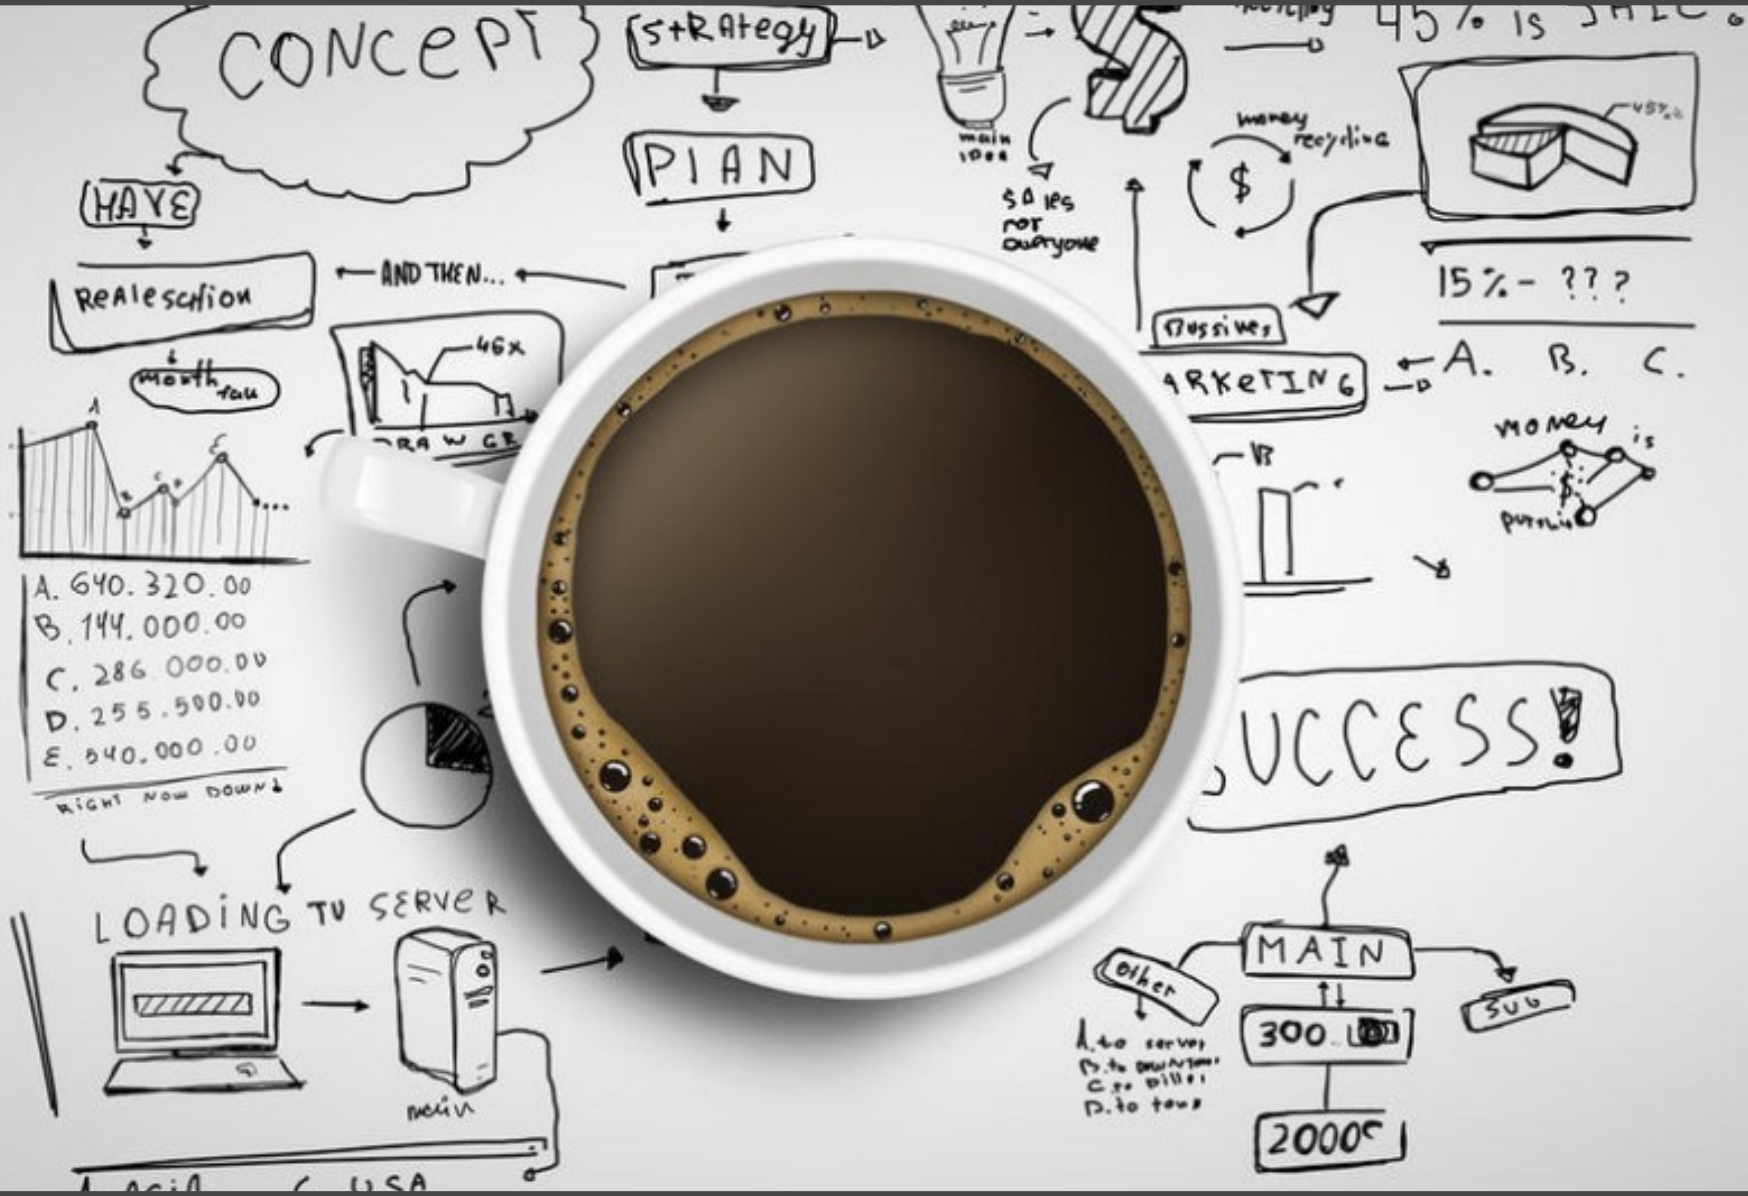

Criteria:

robustness, complexity, feasibility,
acceptance, costs, installation
effort, state of the art

result:

OTP Tokens / TAN

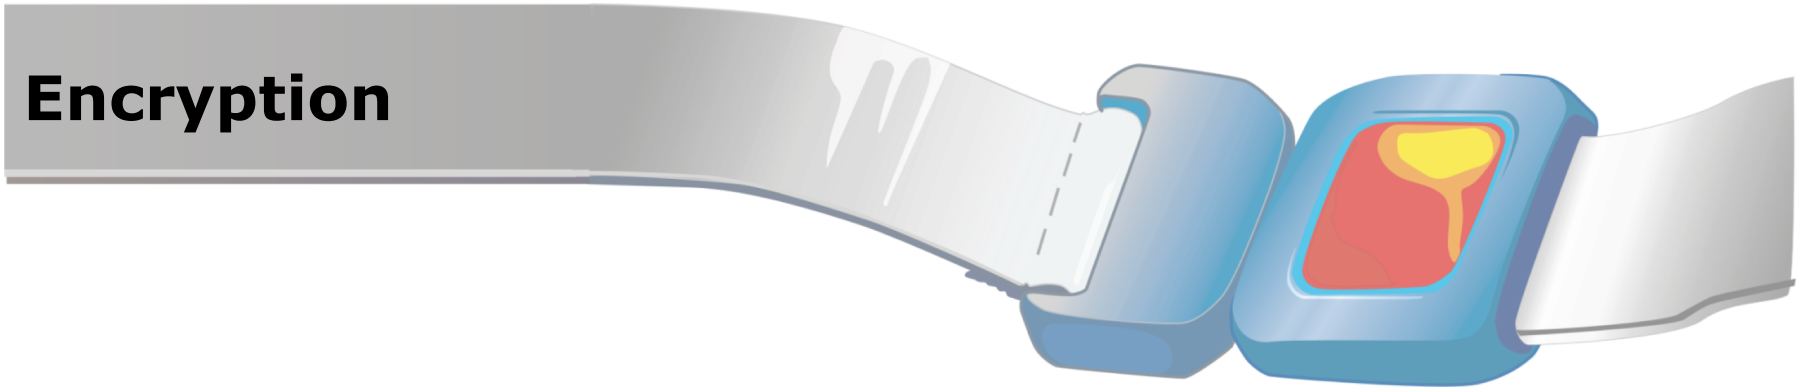

Selection 2nd Factor

- Linux (SSH, Google Authenticator)
- Windows (Rohos)
- HISinOne (TAN lists)

Encryption

Encryption and key management

Chose appropriate encryption solution

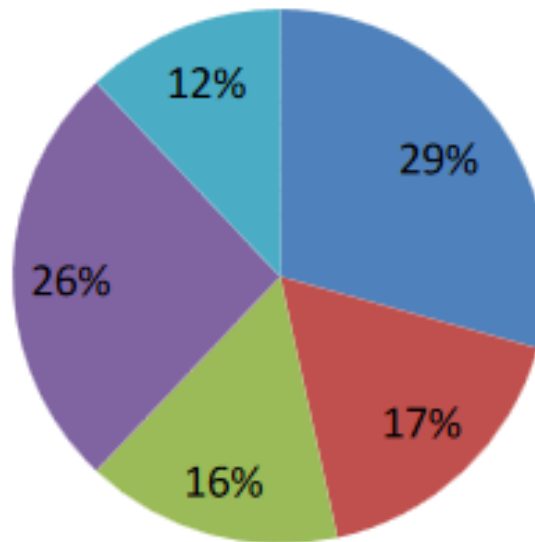

Create use manuals

Check recovery and key escrow

need for Encryption

Manual for

- Cloud systems
- Mobile data storage
- Disk encryption
- E-Mail certificates
- Smartphones
- deletion

Business cards

Risk ID	Asset	Value	Threat	Existing Controls	Still existing vulnerabilities / weaknesses	Impact	Likelihood	Risk	Risk owner	Actions
01	access logs in database	medium	disclosure	authorized access, strong passwords	information disclosure with reduced likelihood	2	1	2	Data centre	Awareness, guidelines for handling with access logs, separated networks, authorized access, strong passwords
02	access logs in database	medium	tampering	authorized access, strong passwords	tampering with reduced likelihood	3	2	6	Data centre	Awareness, guidelines for handling with access logs, separated networks,
04	authorization groups	high	tampering	authorized access, strong passwords	tampering	4	2	8	Data centre, HR	Awareness, guidelines, separated networks,

Thank you

Any questions?
