

Sprint Objectives

1. Confirm eduGAIN DS privacy policy is still up-to-date
 - Confirmed with developers that this is the case ✓
2. Get feedback from current DS users
 - Get list of SPs and their contacts that have been using EDS ✓
 - Create survey and get feedback ✓
 - Invite SP operators to complete survey ✓
 - Analyze survey results and write a short report (almost ✓)

(Draft) Feedback Report

- 7 of 9 SP operators have answered
- Draft report written (minus potentially 2 answers)
- Small sample but neutral or positive feedback from SP operators

(Preliminary) Conclusions

4 Conclusion

Analyzing the responses above the following statements can be made:

- SP operators are generally quite satisfied with the function and the operation of the eduTEAMS Discovery Service (e.g. reflected in responses to question C.). 4 survey participants expressed a positive and 3 a neutral/rather-positive opinion of the service. There has been no negative feedback in the responses received.
- SP operators appreciate that there is a generic-purpose discovery service available in eduGAIN, especially if an SP's local federation does not operate a Discovery Service also listing eduGAIN IdPs. 3 of 4 service operators (who explicitly responded to question D.) consider using the discovery service also for additional SPs.
- Ease-of use, speed and stability of the eduTEAMS Discovery Service were positively mentioned.
- 3 SP operators chose eduTEAMS Discovery Service [DS] because DiscoJuice no longer has been available.
- The IdP filter (one of the key features of the CESNET Discovery Service) was not mentioned as advantage. Most probably this feature is not known very well even though it is a key differentiator compared to other SAML Discovery Service implementations.
- A wish and need was expressed to make the Discovery Service also support non-eduGAIN IdPs by 2 of 4 survey participants who explicitly responded to question E.
- Feature requests mentioned (in questions G and H) are: Documentation of Content Security Policy requirements, support for non-eduGAIN IdPs, allow SP to prioritize certain IdPs in the list of IdPs, order IdPs by geolocation information
