Sikt

Argus roadmap

Near future

Morten Brekkevold
Argus GÉANT infoshare 28.11.2022

ARGUS

Sikt

Notification plugins

Ready plugins

- MS Teams

- Plugins aren't immediately usable until the front-end is updated to support their configuration.

Planned plugins

- Slack

Sikt

Two-way ticket integration

What is two-way integration?

- Argus can create new tickets in your ticket application with the click of a button

- Incident details and link automatically copied to new ticket

- Link to new ticket added to Argus incident

- Plugin support just released in back-end, but front-end lacks support

Implemented plugins

- Request Tracker

- GitLab

- GitHub

- JIRA

Sikt

SAML

Argus already supports federated login

- However, support is based on OAuth2

- FEIDE supports OAuth2 in addition to SAML

- But few other IdP-s do...

SAML support

- eduGAIN

Asynchronous notification processing

Current implementation is synchronous

- Notifications are dispatched immediately when events are received

Asynchronous processing will enable

- Queuing

- Batching

- Consolidation

- Delaying

Sikt

More glue services

In the works

- Nagios (thanks to SUNET)

- Zino

- Juniper Mist AI

- Aruba Mobility Master

Planned

- Zabbix

Deployment options

Docker Compose (more or less done)

- https://github.com/Uninett/argus-docker/

Kubernetes

- Helm chart

- NMaaS?

- Sikt uses a custom Gitlab pipeline for production deployment to Kubernetes
