# **5G FWA IN ORKNEY: BUILD AND OPERATION**

**MAREK ISALSKI, FAELIX**  
**GREG WHITTON, CLOUDNET**

# About Marek

- ✘ CTO [@FAELIX](https://faelix.net/) – <https://faelix.net/>
  - ✘ Small consultancy helping alt-nets build and scale
- ✘ PC [@uknof](https://uknof.uk/) – <https://uknof.uk/>
- ✘ Crew [@net\\_mcr](https://www.netmcr.uk/) – <https://www.netmcr.uk/>
- ✘ Tweet [@maznu](https://twitter.com/maznu) — or our mascot [@NetworkMoose](https://twitter.com/NetworkMoose)
  
- ✘ Joined by **Greg Whitton**, of **CloudNet** in Orkney, for Q&A / discussion

# 5G NEW THINKING

# 5GNT: Orcadian Inception

- ✘ UK Government, Cisco, University of Strathclyde
  - ✘ Aims to produce a "toolkit" of how to build rural 5G networks; numerous "testbeds" running for ~6mo
- ✘ CloudNet (local WISP) + Faroes Telecom — testbed
  - ✘ NetEngs experience of previous 4G projects
    - ✘ And some L2 to L3 "growing pains" to resolve
    - ✘ Issues common in organically-grown WISPs

# Project/Vendor "Interop"

- ✘ 5GNT testbed was short-term project
  - ✘ Timescales, reporting, multi-stakeholder
  - ✘ WISP is "local telco"; has ongoing responsibilities
- ✘ 5GNT project has \$large\_vendor involved
  - ✘ \$large\_vendor has preference of NOS/hardware
  - ✘ WISP bears most of cap-ex, all long-term op-ex

# Vendor Selection

- ✘ **University of Strathclyde** had experience/partners:
  - ✘ **Cisco** — core (...but ended up **Open5GS**)
  - ✘ **Open5GS** — on-WISP user-plane function
  - ✘ **Amarisoft** — eNodeB/gNodeB (100MHz 4x4 TDD)
  - ✘ **AW2S** — 4G+5G radios (e.g. 2x2 MIMO Blackhawk)
  - ✘ **Alpha Wireless** — antenna (e.g. AW3463)
  - ✘ UEs — **Sunwave, Zyxel, Apple iPad, Android** tablet

# Vendor Selection

- ✘ **CloudNet** had preferences too:
  - ✘ Knows the area and their challenges
  - ✘ Knows their budget
  - ✘ Will be responsible for operations long-term
  - ✘ Will have to manage supply-chain and sparing
  - ✘ Sometimes you have to accept (and work around) sharp edges in customer's chosen NOS/hardware

# Architecture Decision

- ❌ IPv6/IPv4 dualstack from the beginning 
- ❌ NOS has no IS-IS support
- ❌ Vendor's OSPF is a hot mess
- ❌ Vendor's iBGP with IPv6 is terrible
- ❌ Vendor's BGP next-hop ignores IGP metric
  
- ❌ Customer has preference — can we make it work?

# Architecture Decision

- ❌ IPv6/IPv4 dualstack from the beginning ✓
- ❌ NOS has no IS-IS support
- ❌ Vendor's OSPF is a hot mess
- ❌ Vendor's iBGP with IPv6 is terrible
- ❌ Vendor's BGP next-hop ignores IGP metric
- ❌ Customer has preference — can we make it work?

don't use IS-IS

# Architecture Decision

- ❌ IPv6/IPv4 dualstack from the beginning ✓
- ❌ NOS has no IS-IS support
- ❌ Vendor's OSPF is a hot mess → don't use OSPF
- ❌ Vendor's iBGP with IPv6 is terrible
- ❌ Vendor's BGP next-hop ignores IGP metric
- ❌ Customer has preference — can we make it work?

# Architecture Decision

- ❌ IPv6/IPv4 dualstack from the beginning ✓
- ❌ NOS has no IS-IS support → don't use IS-IS
- ❌ Vendor's OSPF is a hot mess → don't use OSPF
- ❌ Vendor's iBGP with IPv6 is terrible → don't use iBGP
- ❌ Vendor's BGP next-hop ignores IGP metric
  
- ❌ Customer has preference — can we make it work?

# Architecture Decision

- ❌ IPv6/IPv4 dualstack from the beginning ✓
- ❌ NOS has no IS-IS support → don't use IS-IS
- ❌ Vendor's OSPF is a hot mess → don't use OSPF
- ❌ Vendor's iBGP with IPv6 is terrible → don't use iBGP
- ❌ Vendor's BGP next-hop ignores IGP metric → don't have IGP
- ❌ Customer has preference — can we make it work?

# Architecture Decision

- ❌ IPv6/IPv4 dualstack from
  - ❌ NOS has no IS-IS supp
  - ❌ Vendor's OSPF is a hot
  - ❌ Vendor's iBGP with in v
  - ❌ Vendor's BGP next-hop ig
- 
- ❌ Customer has preference — can we make it work?

# L2 to L3 Migration

- ✘ Architected / HLD in May 2021 (pen and paper!)
- ✘ Low-Level Design in June 2021 (NetBox)
- ✘ Template-automated in July 2021 (Python)
  
- ✘ August 2021: full BOM costed to the patch cable
- ✘ Deadline of October 2021 for first 5G customers

**WHY ACCEPT THOSE  
NOS CONSTRAINTS?**

# Quadruple-Whammy

- ✘ Pandemic
  - ✘ Almost everything is harder, takes longer
- ✘ Brexit
  - ✘ Customs charges, import duty, returns to supplier
- ✘ Supply Chain
  - ✘ Not having e.g. PSU capacitors affects all vendors
- ✘ Orkney
  - ✘ Turns out that Orkney is Quite Far

# How Far?

ICELAND

Labrador  
Sea

Thousands of Miles of Sea

UNITED  
KINGDOM

IRELAND

Birmingham

Lon

Celtic  
Sea

Bay of  
Biscay

**WET AND WINDY**

**"On Orkney the rain can be vertical.  
Vertical upwards."**

*– Trevor, CloudNet Orkney*

# Typical High Site

# Keeping Dry Inside

**"On Orkney the rain can be vertical.  
Vertical upwards."**

*– Trevor, CloudNet Orkney*

**With  
Added  
Sea Salt**

# Will Warranty Cover This?

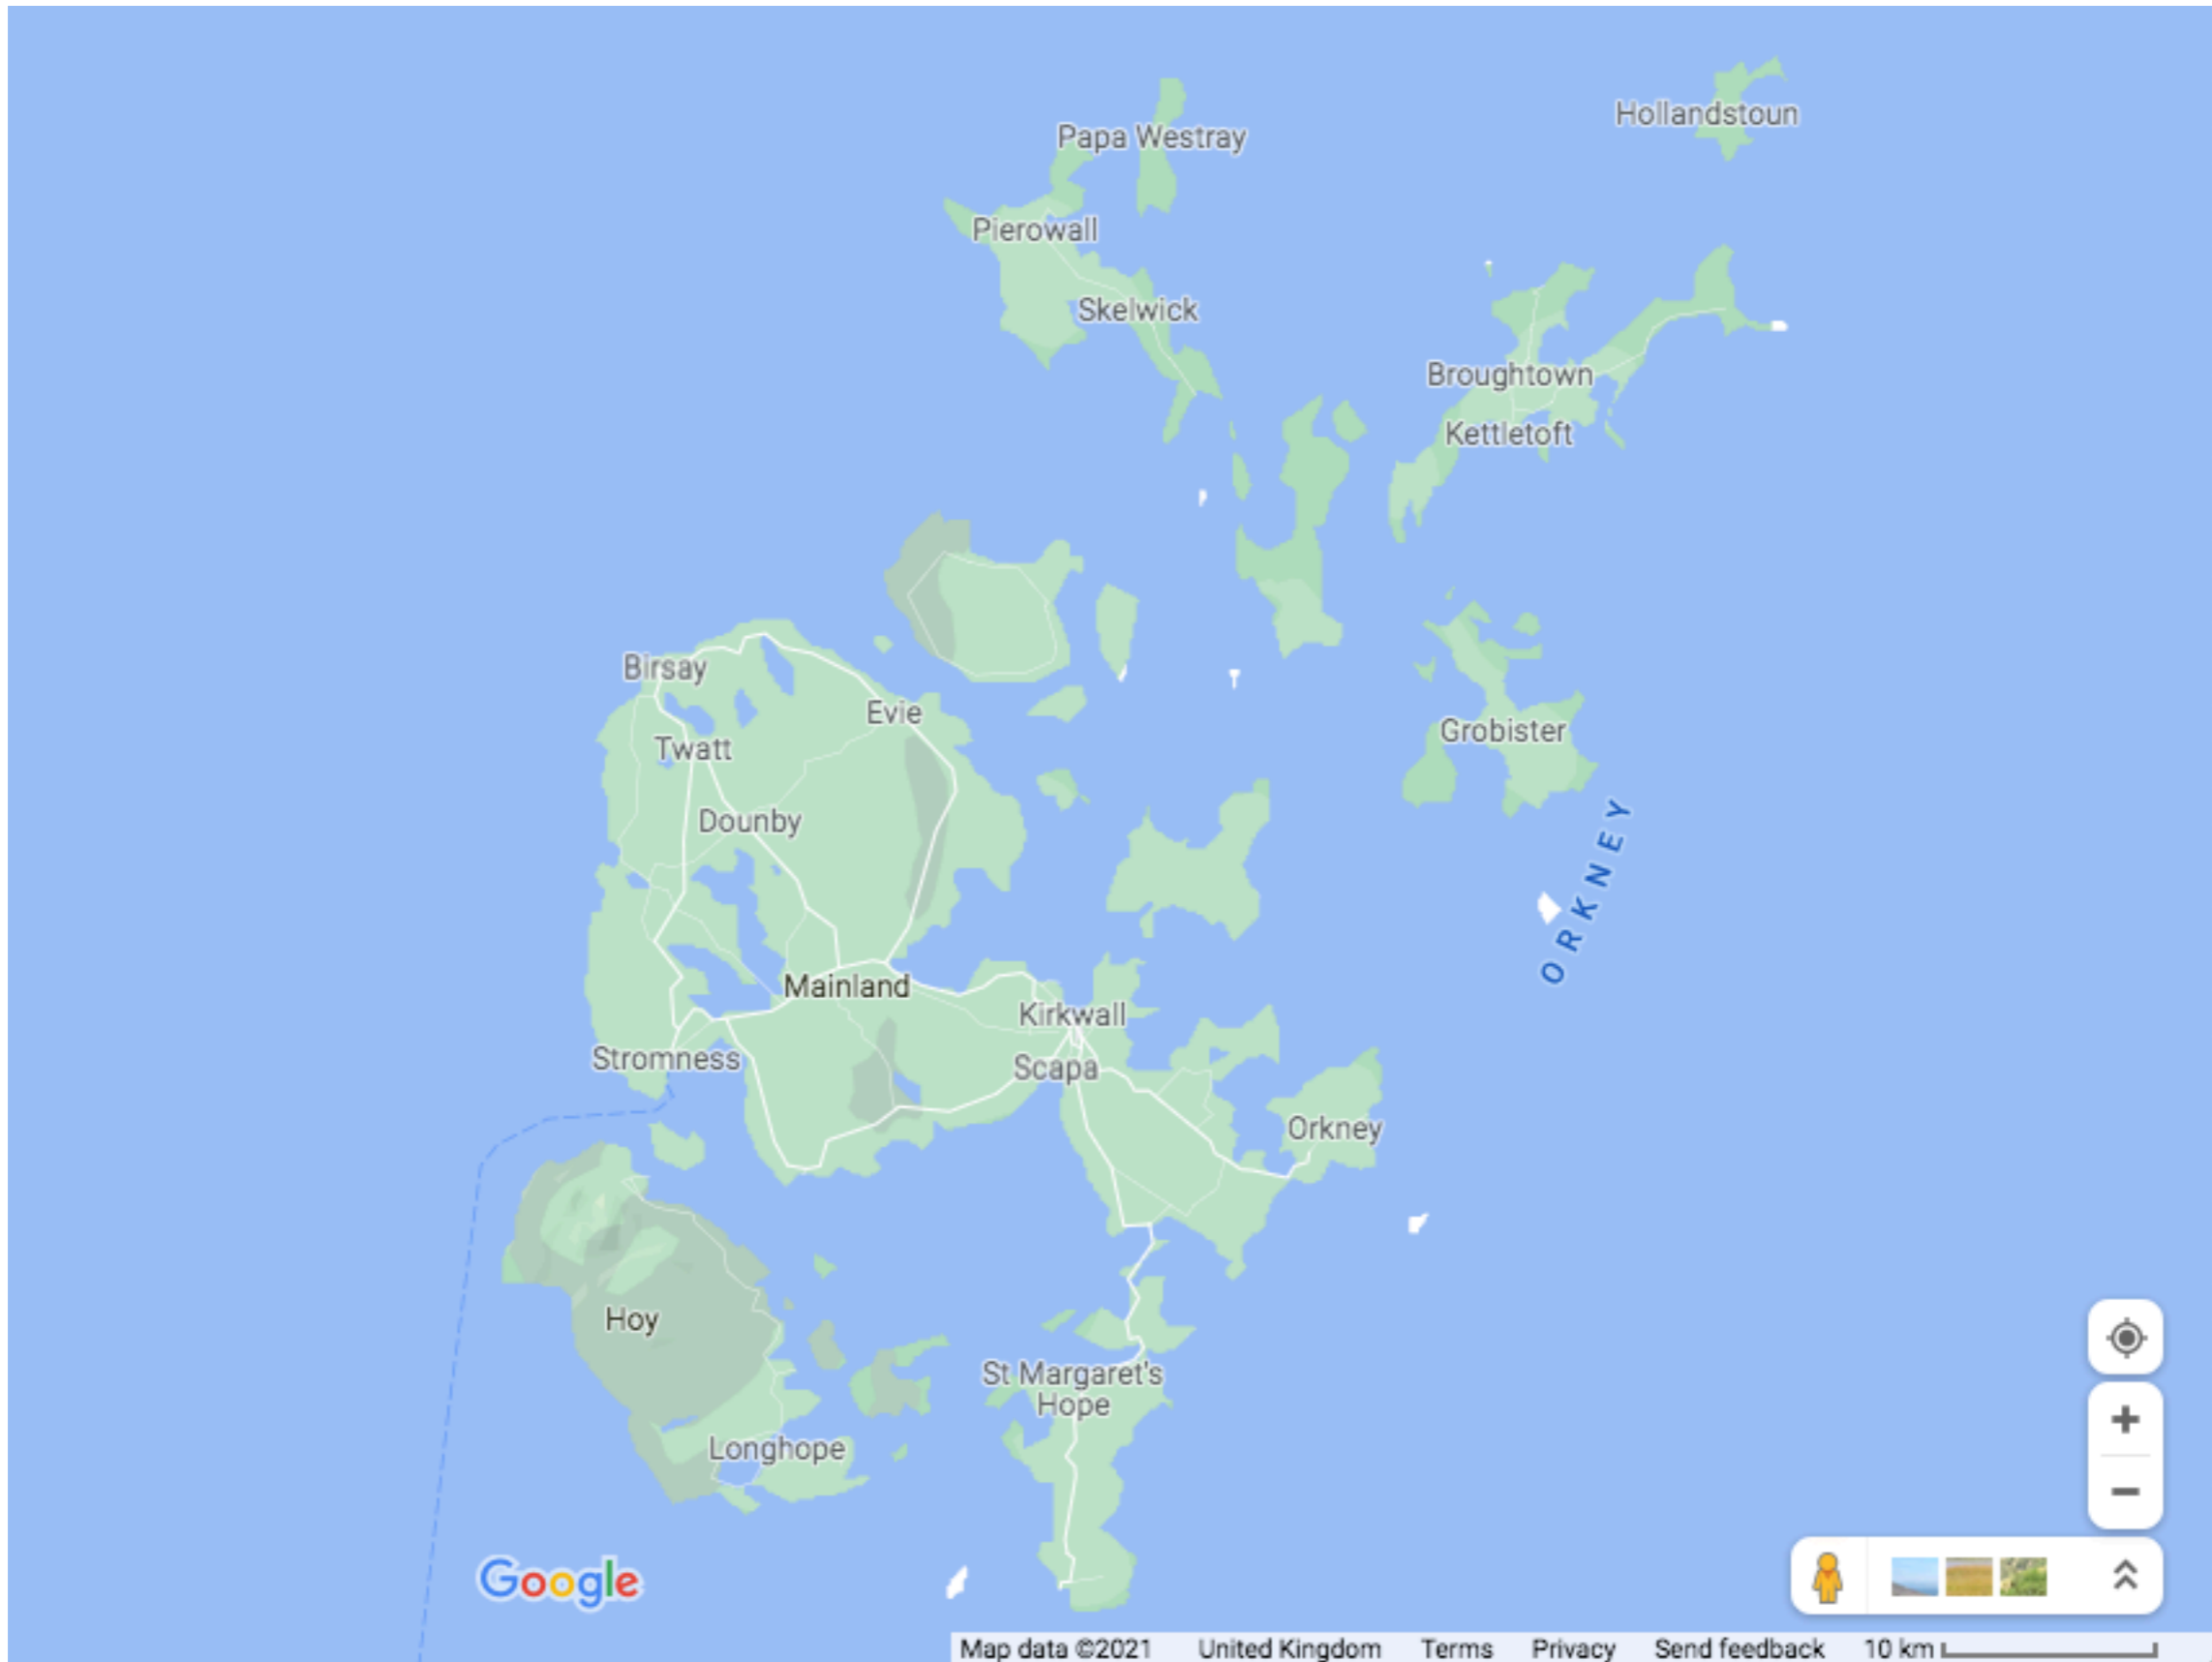

# Not All Vendors are Equal

- ✘ Warranty:
  - ✘ Is this hardware made for these environments?
  - ✘ How long would RMA replacement take to arrive?
  - ✘ Self-sparing was essential!

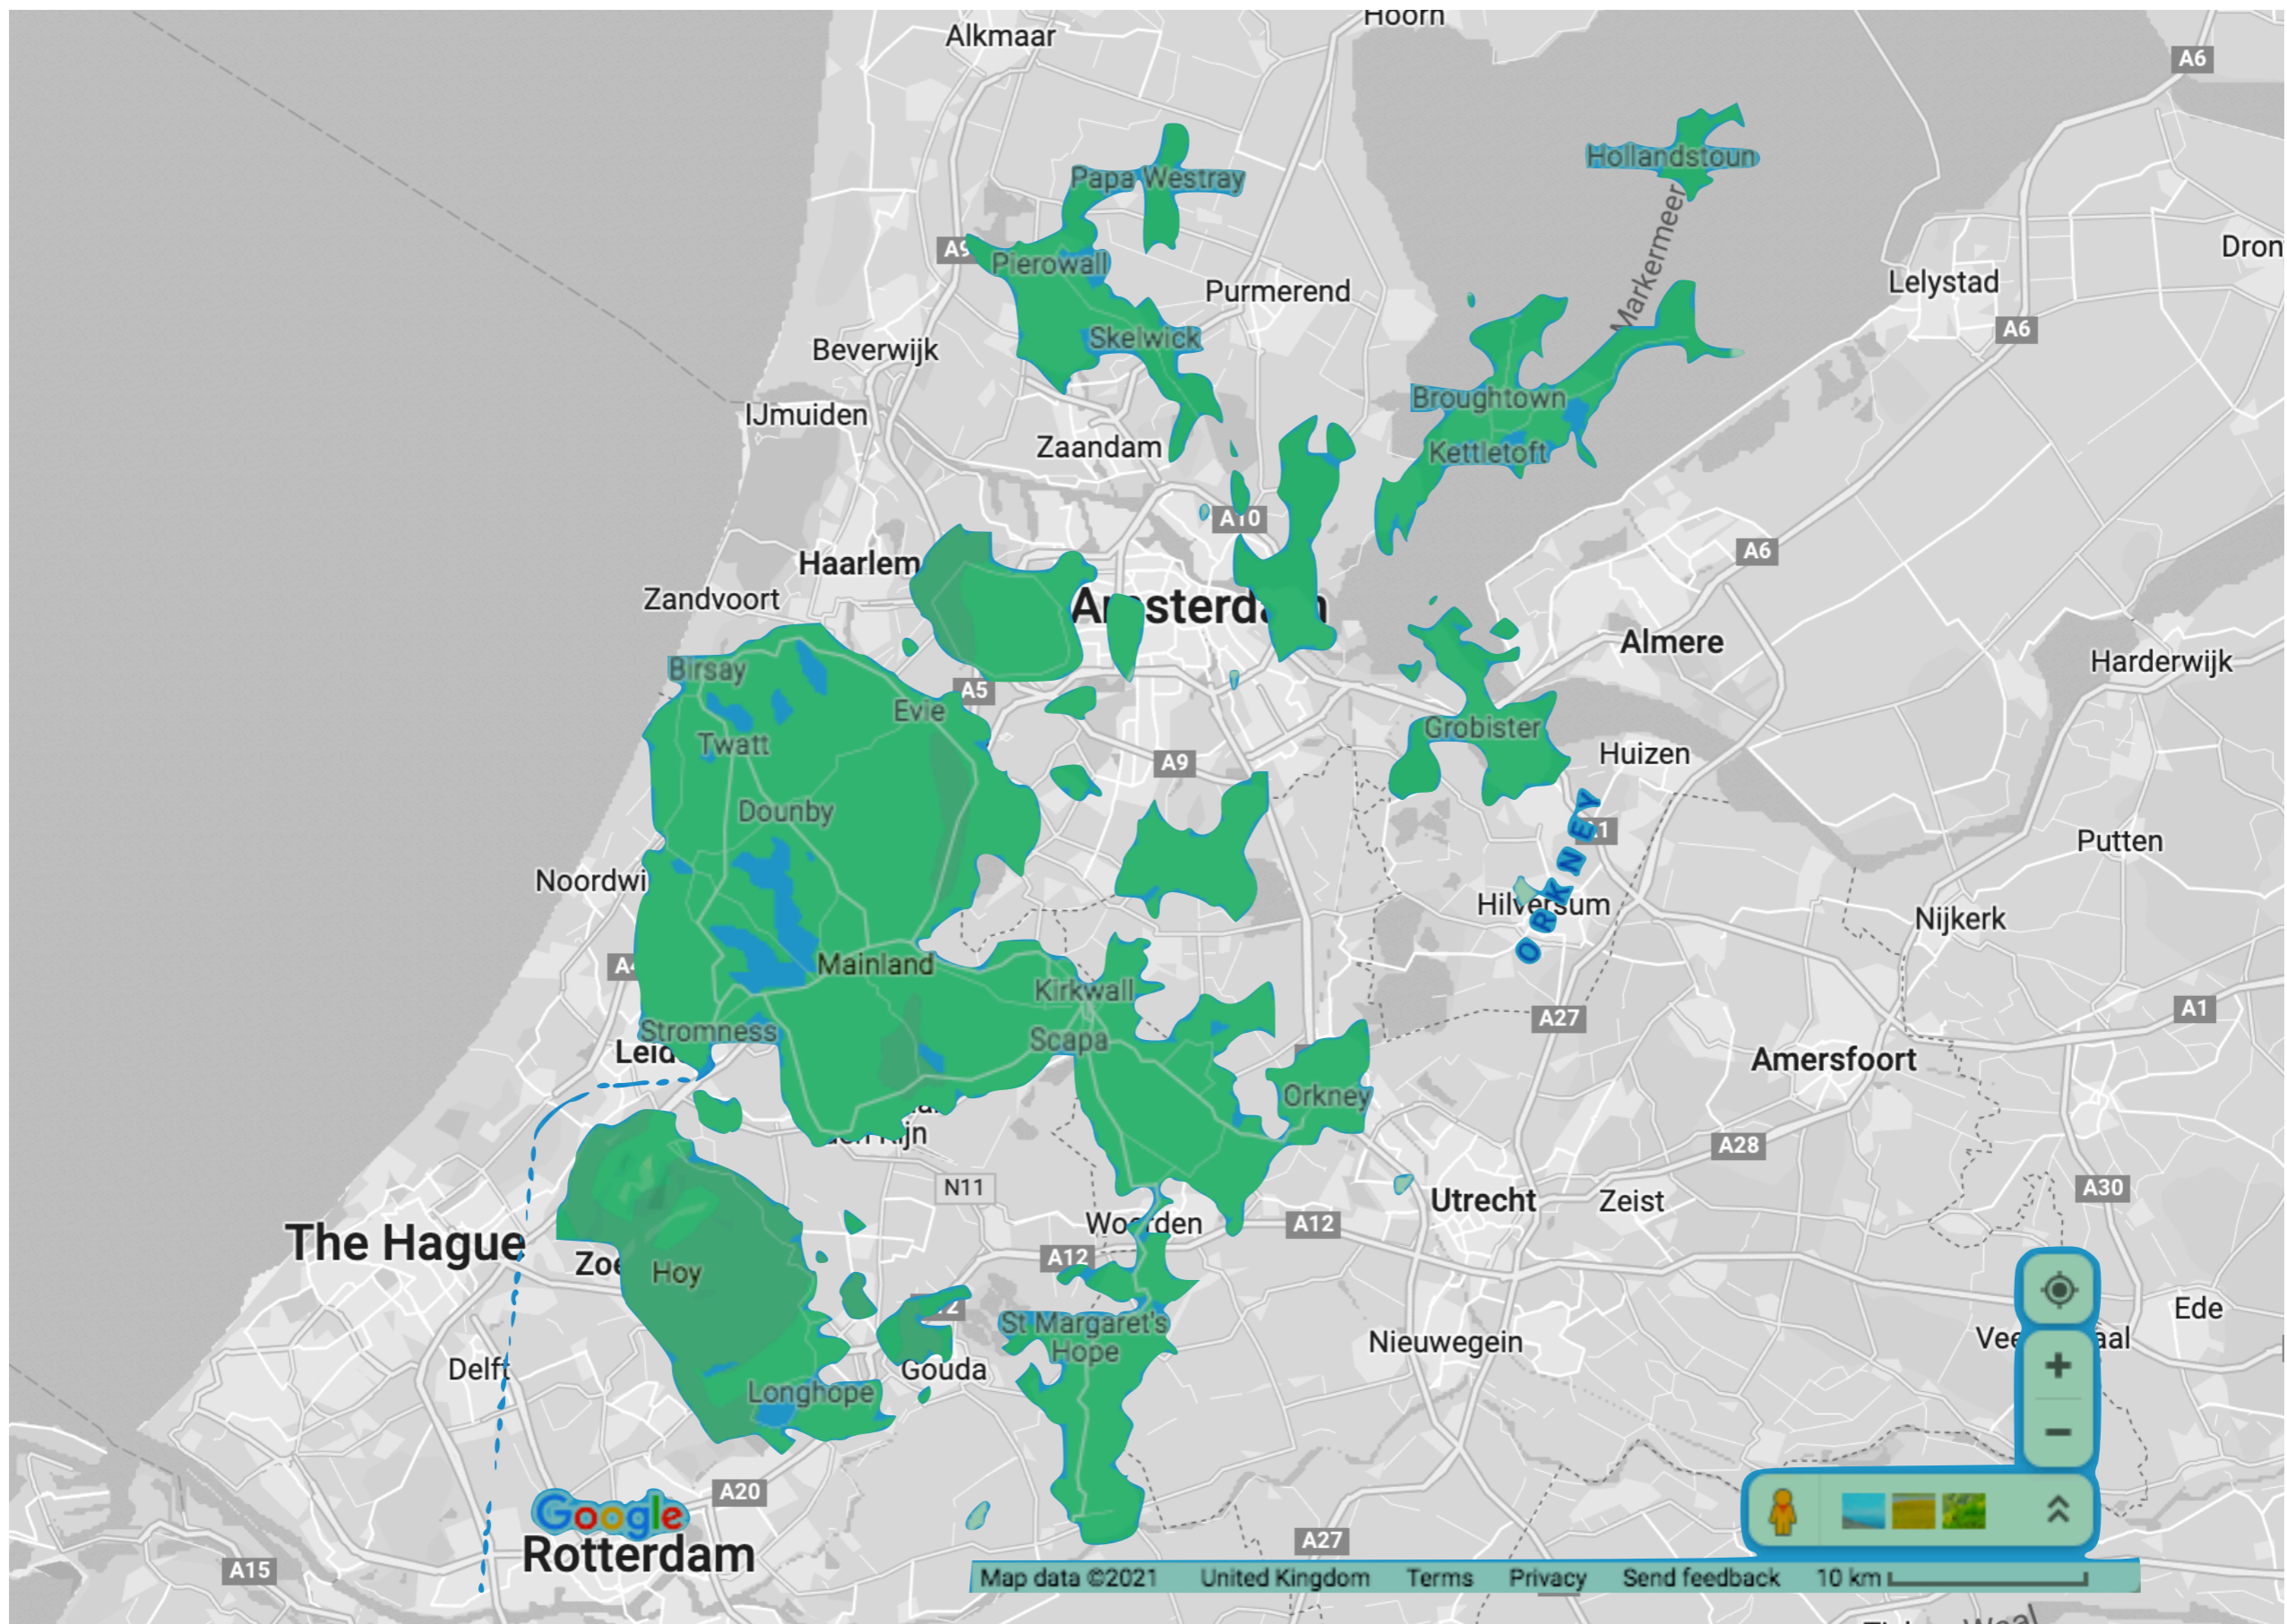

# LOCAL vs REMOTE

**Water instead of fibre :(**

# Fibre 2021

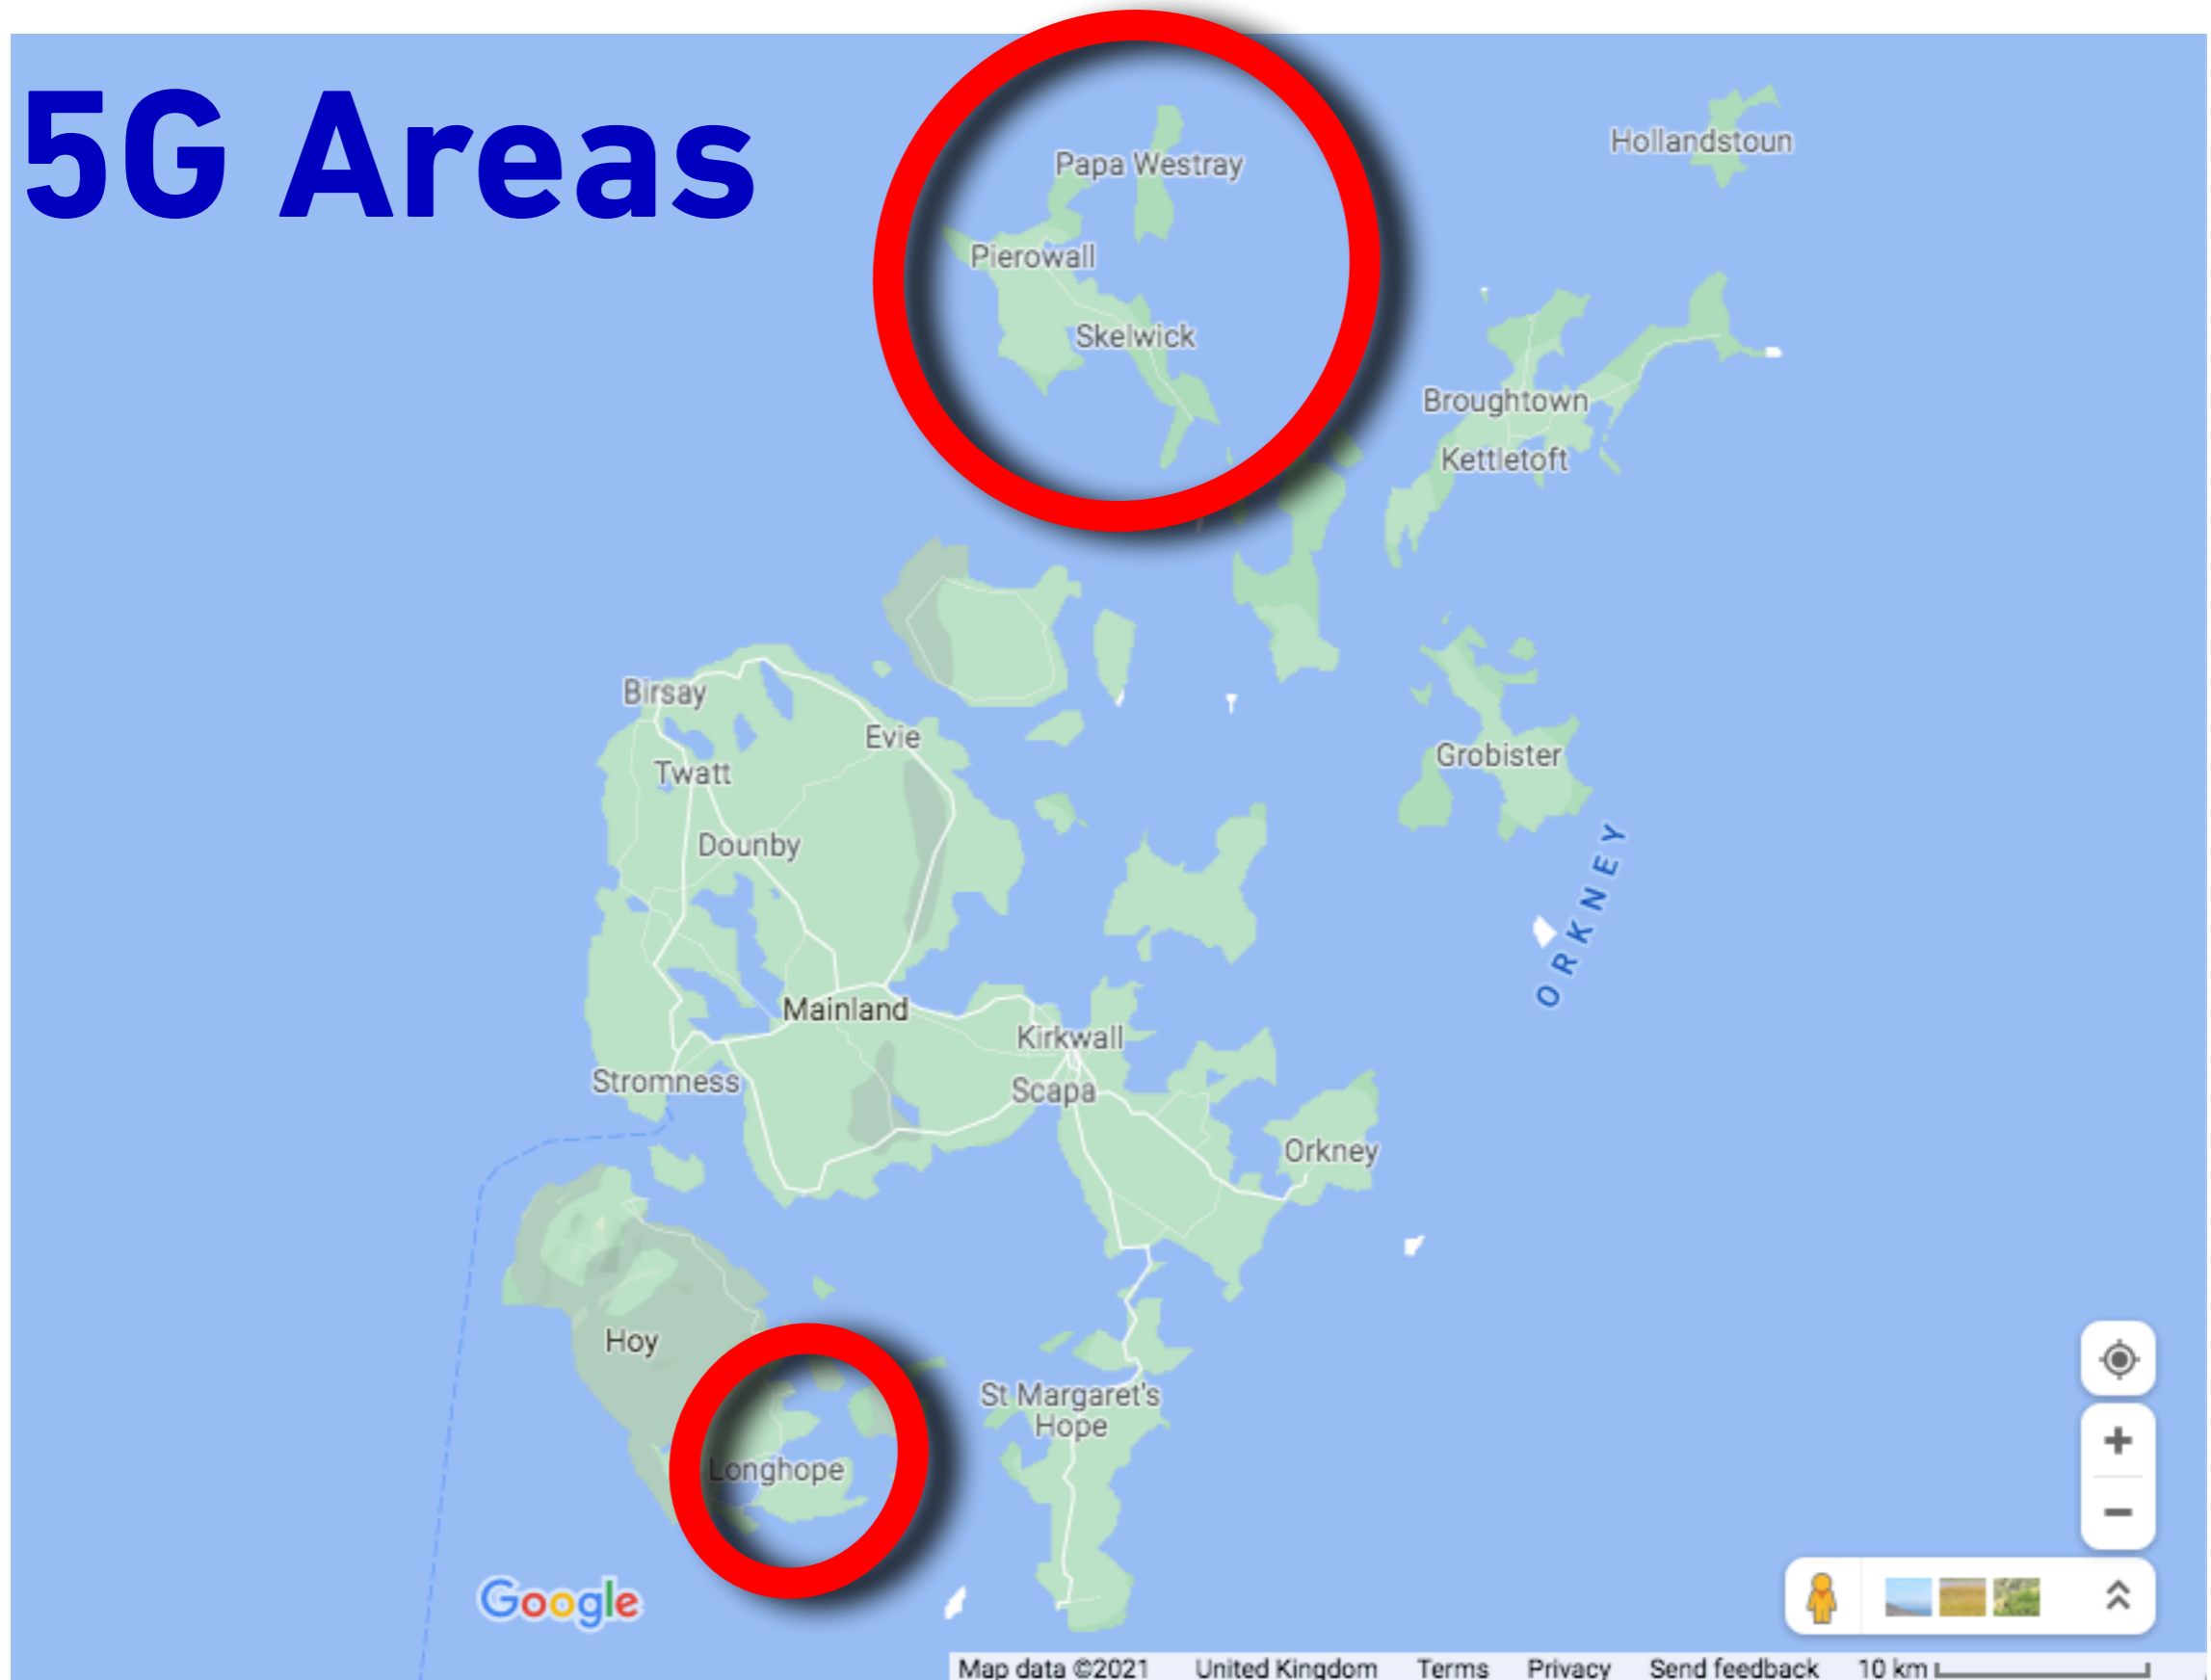

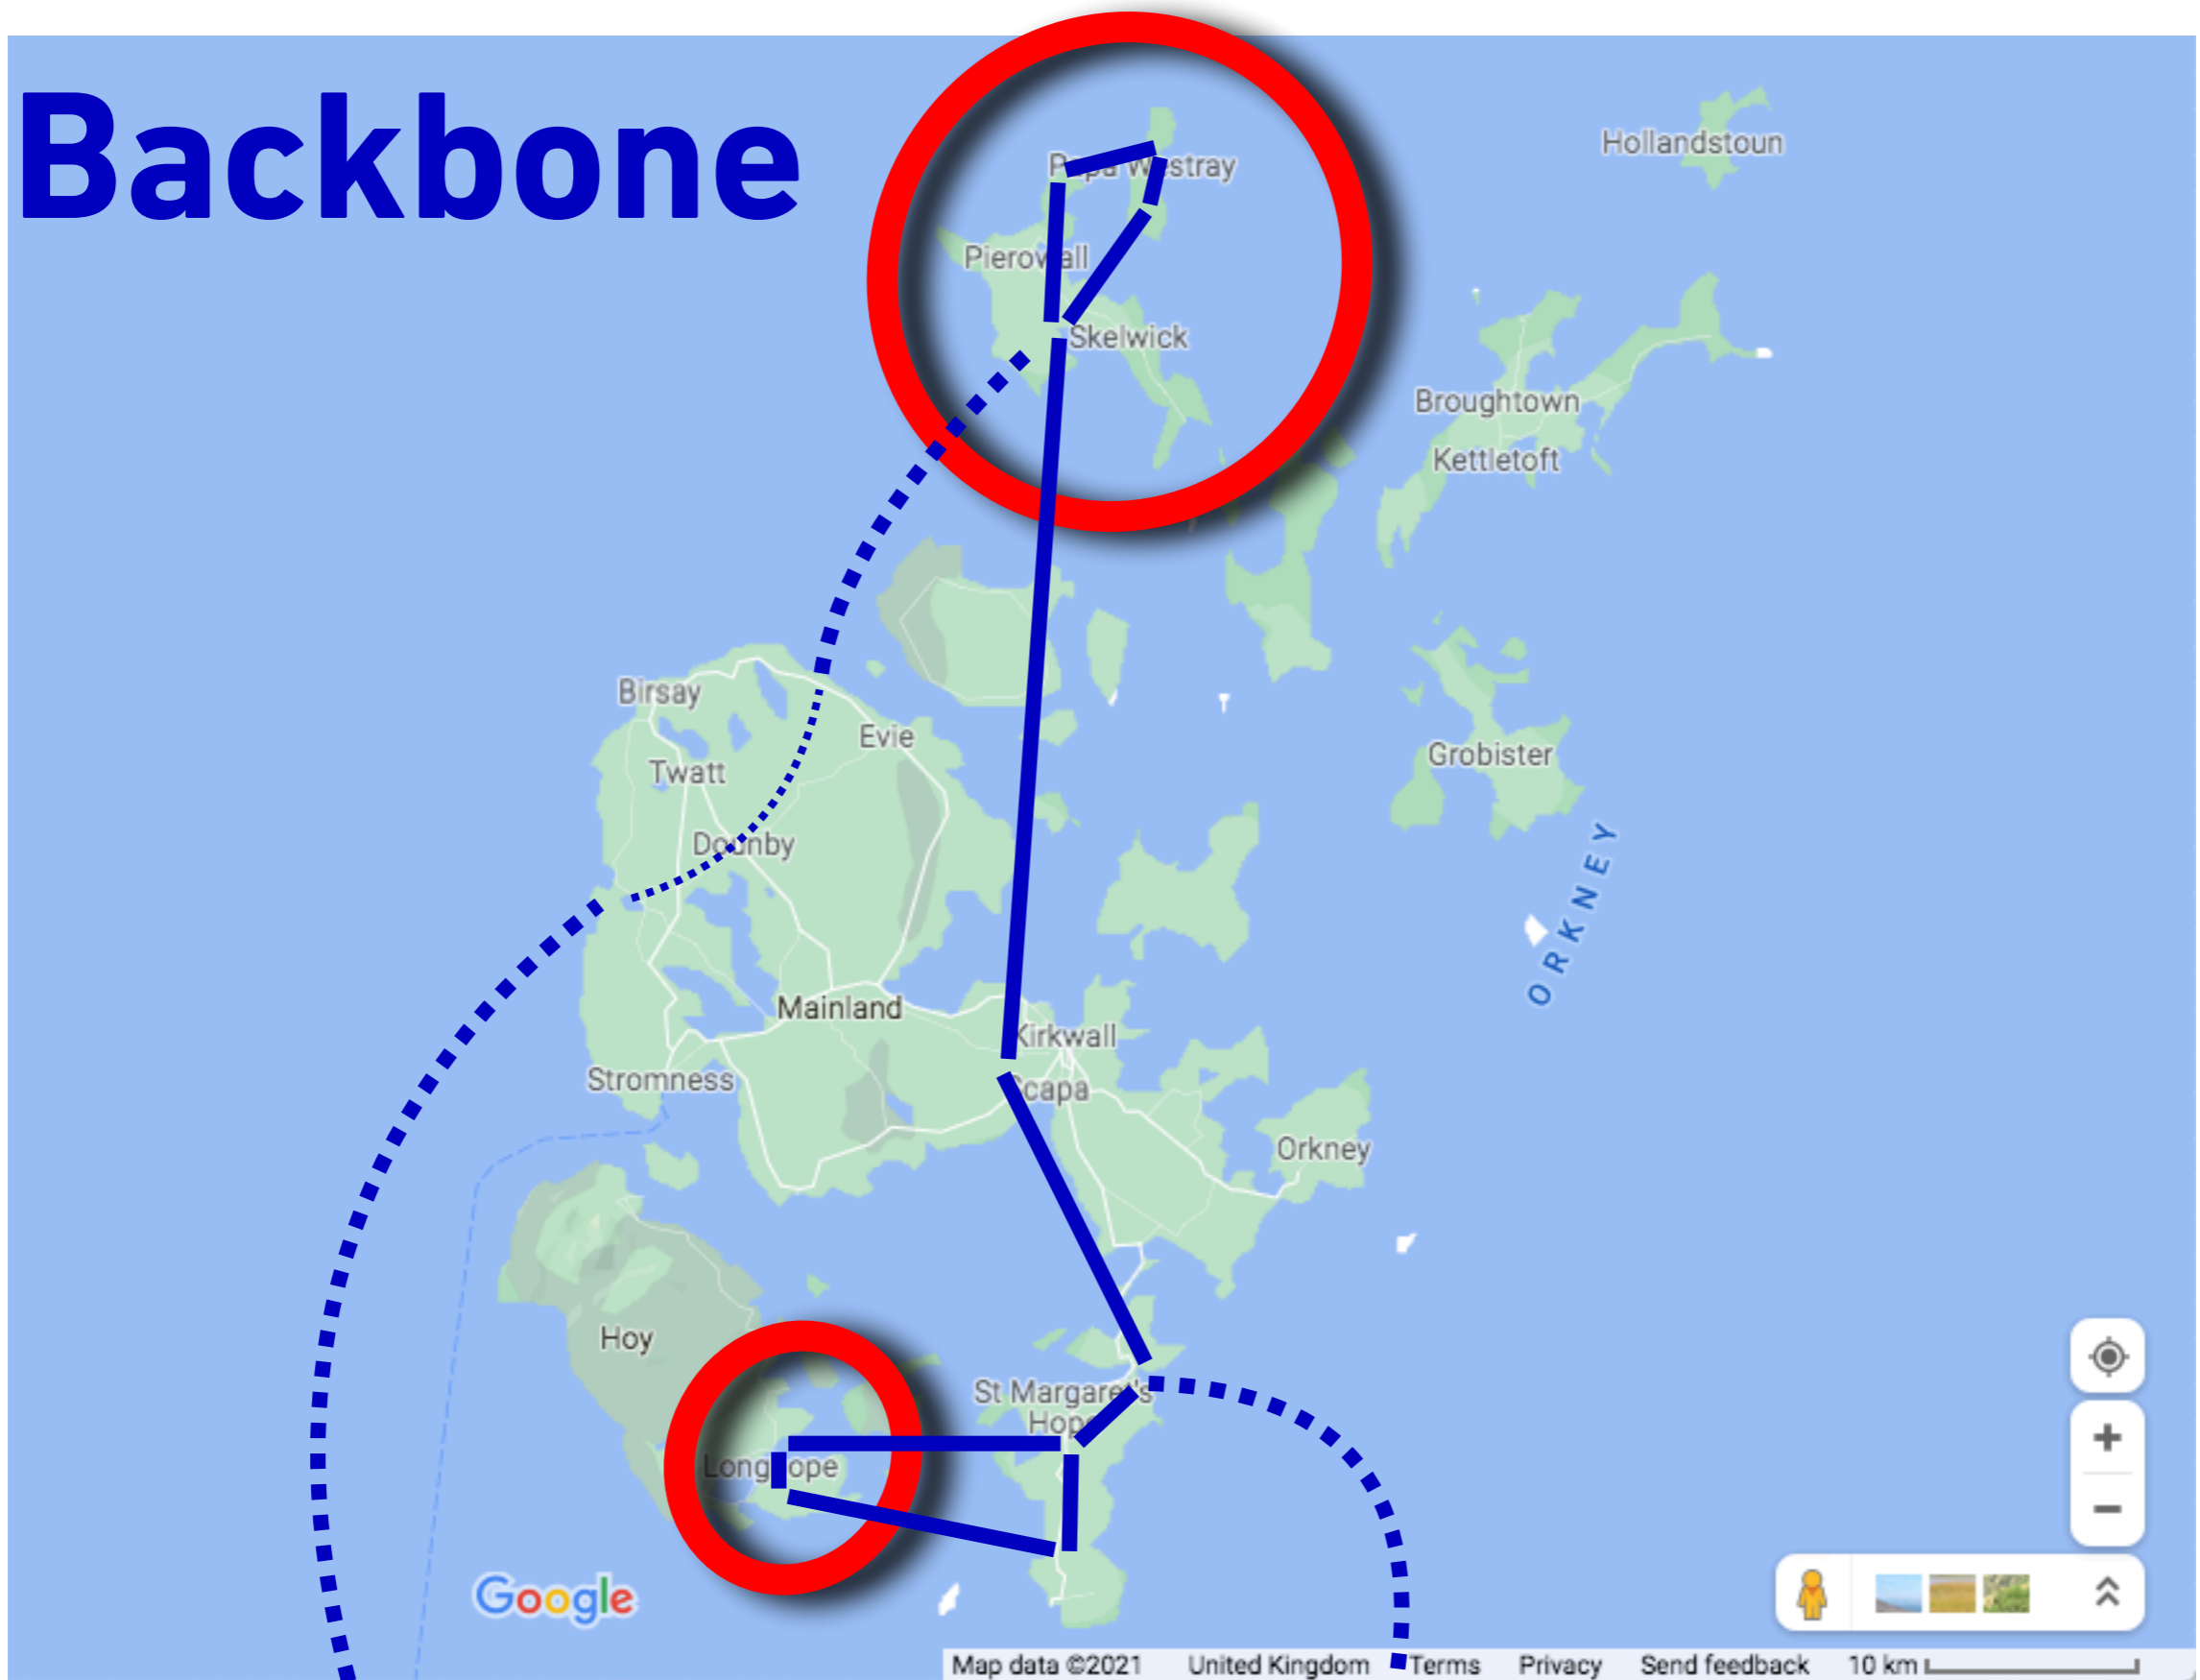

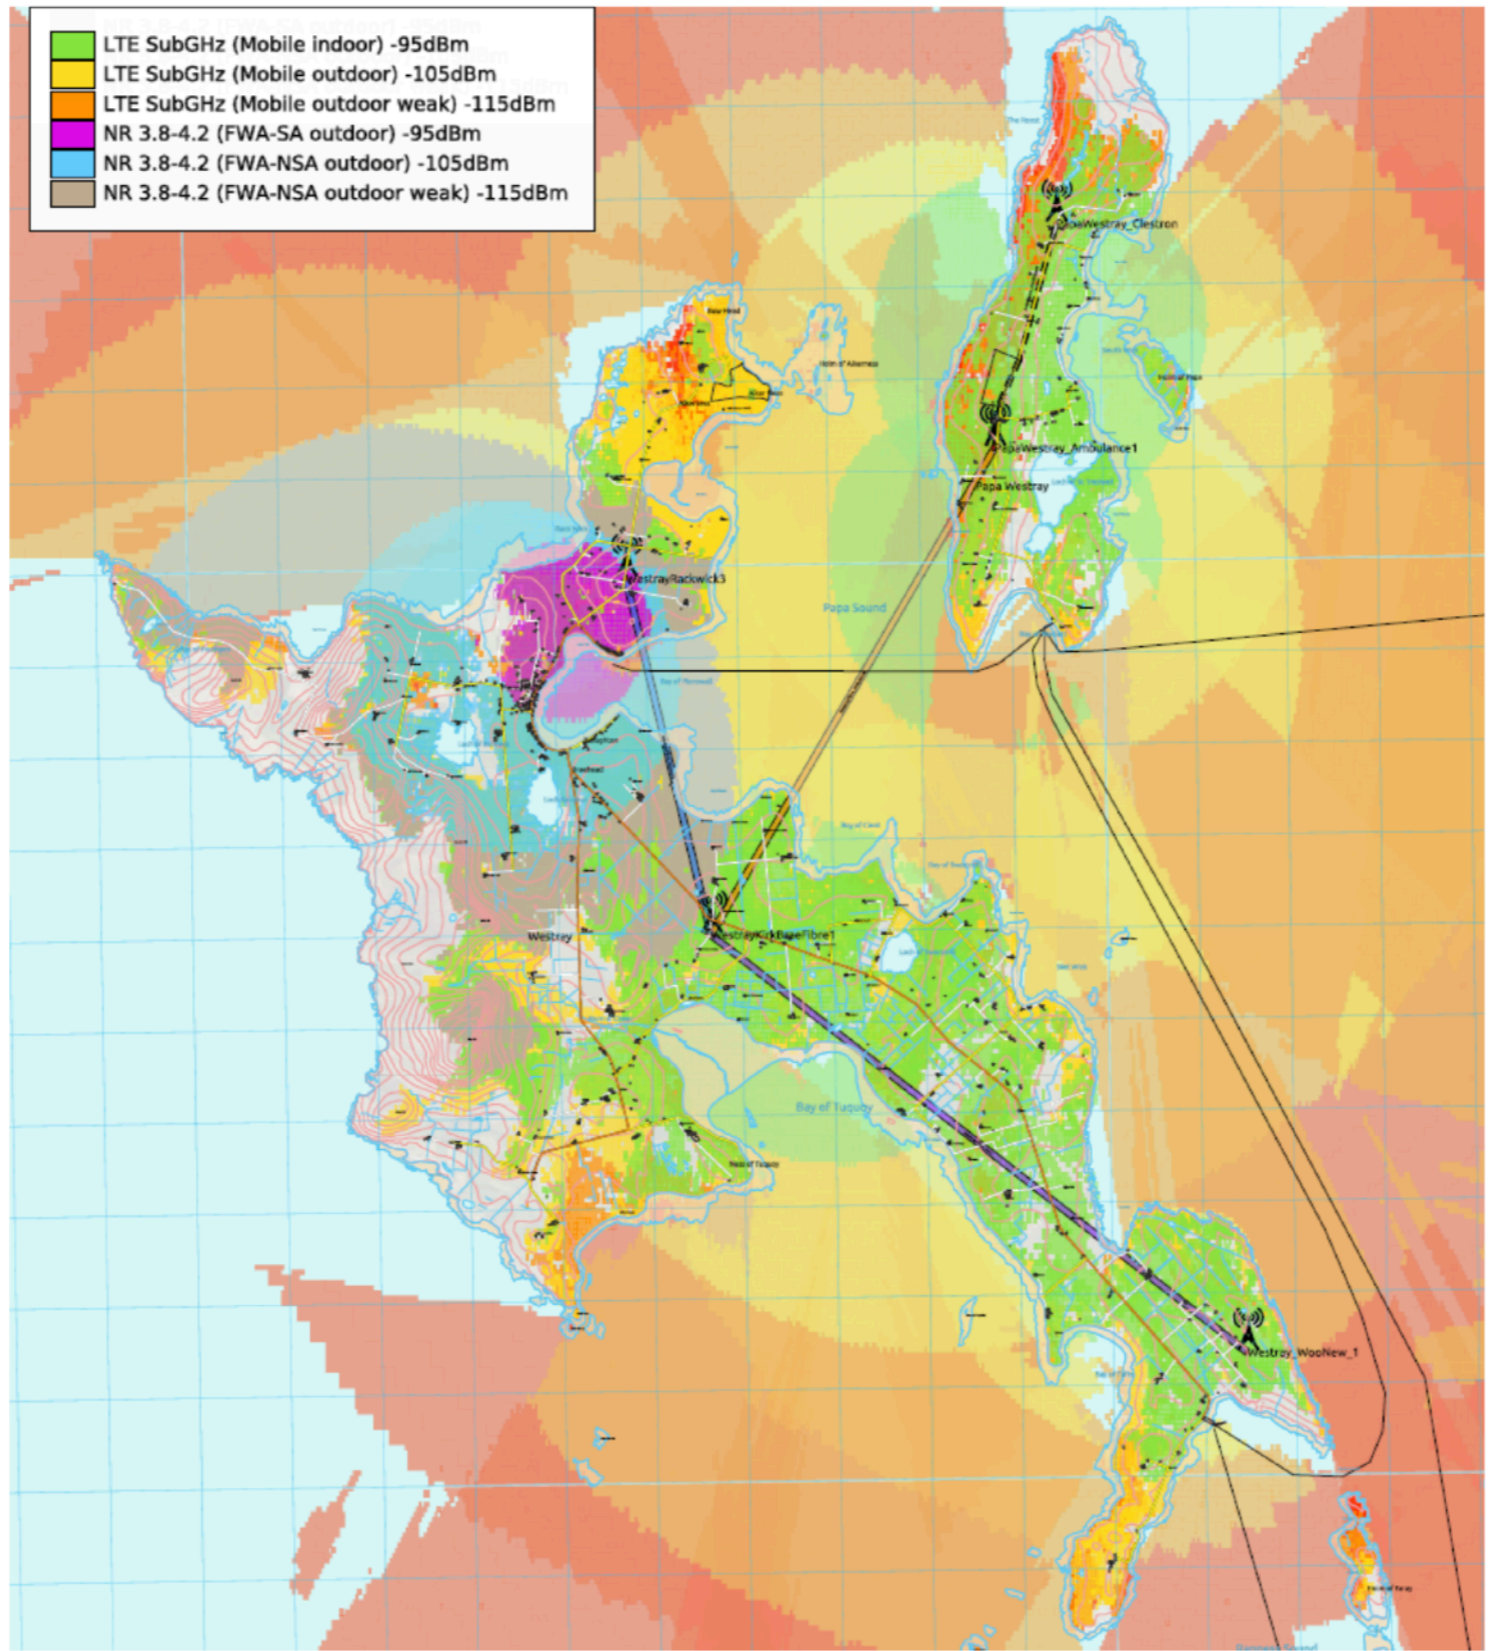

# 5G Areas

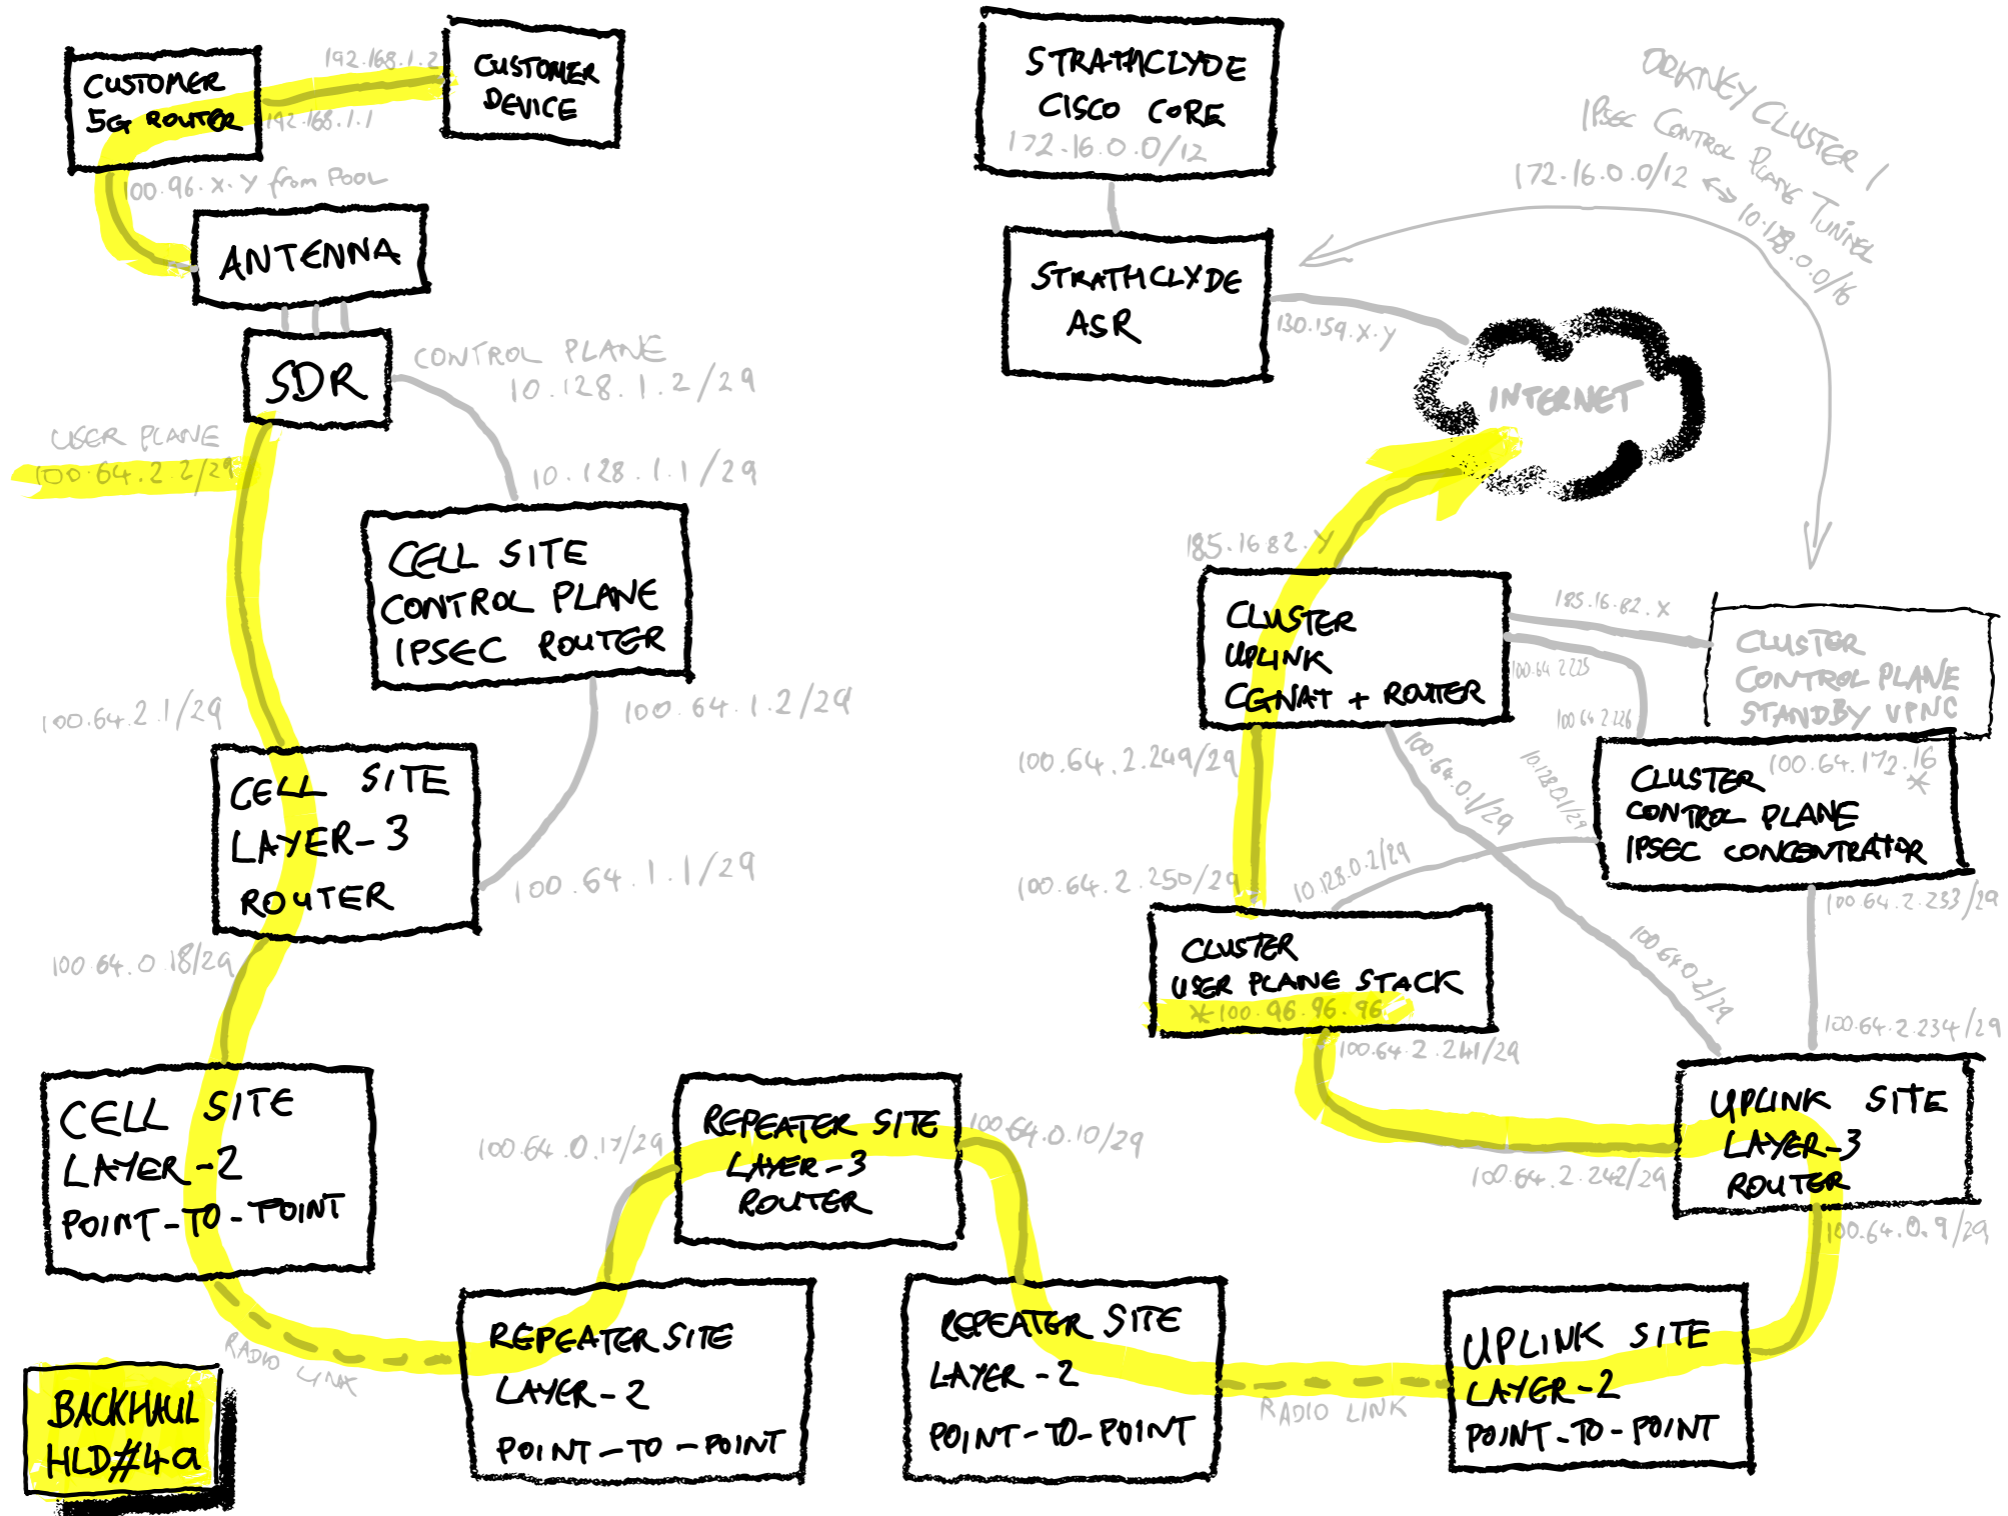

# Backbone

Combined 4G LTE + 5G NR coverage map, showing sites and backhaul links

# High-Level Design

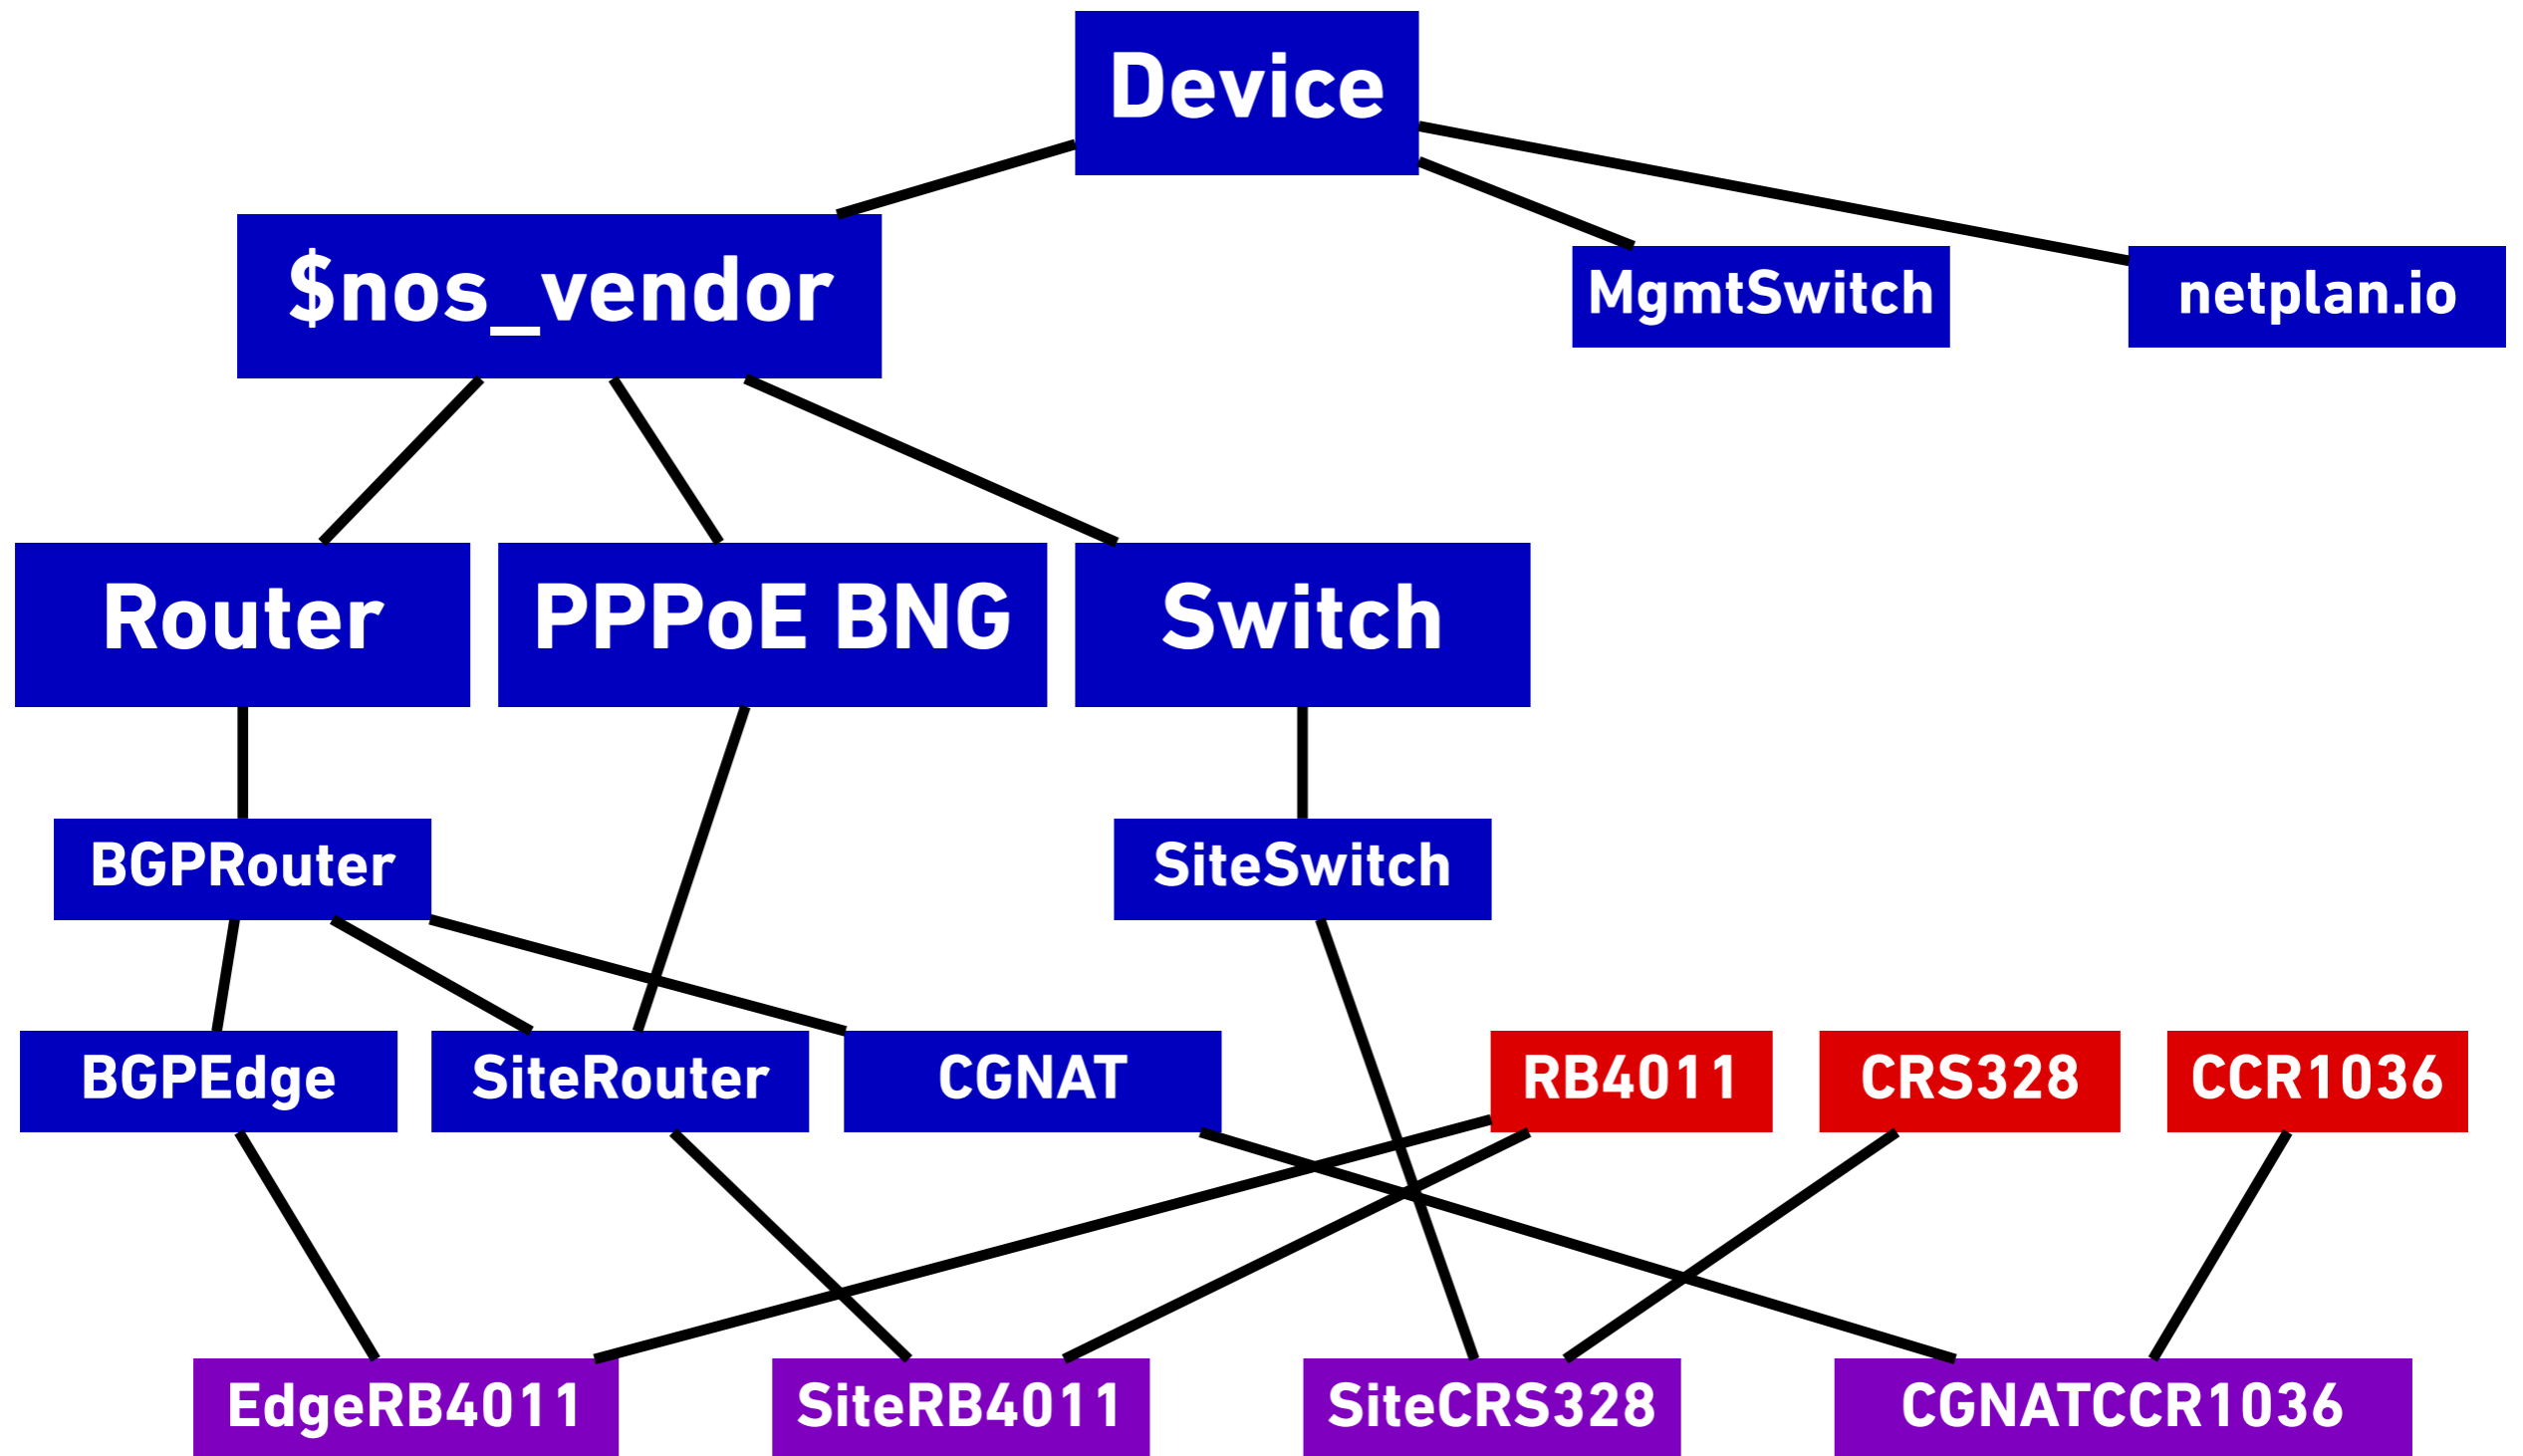

# No Pets Allowed!

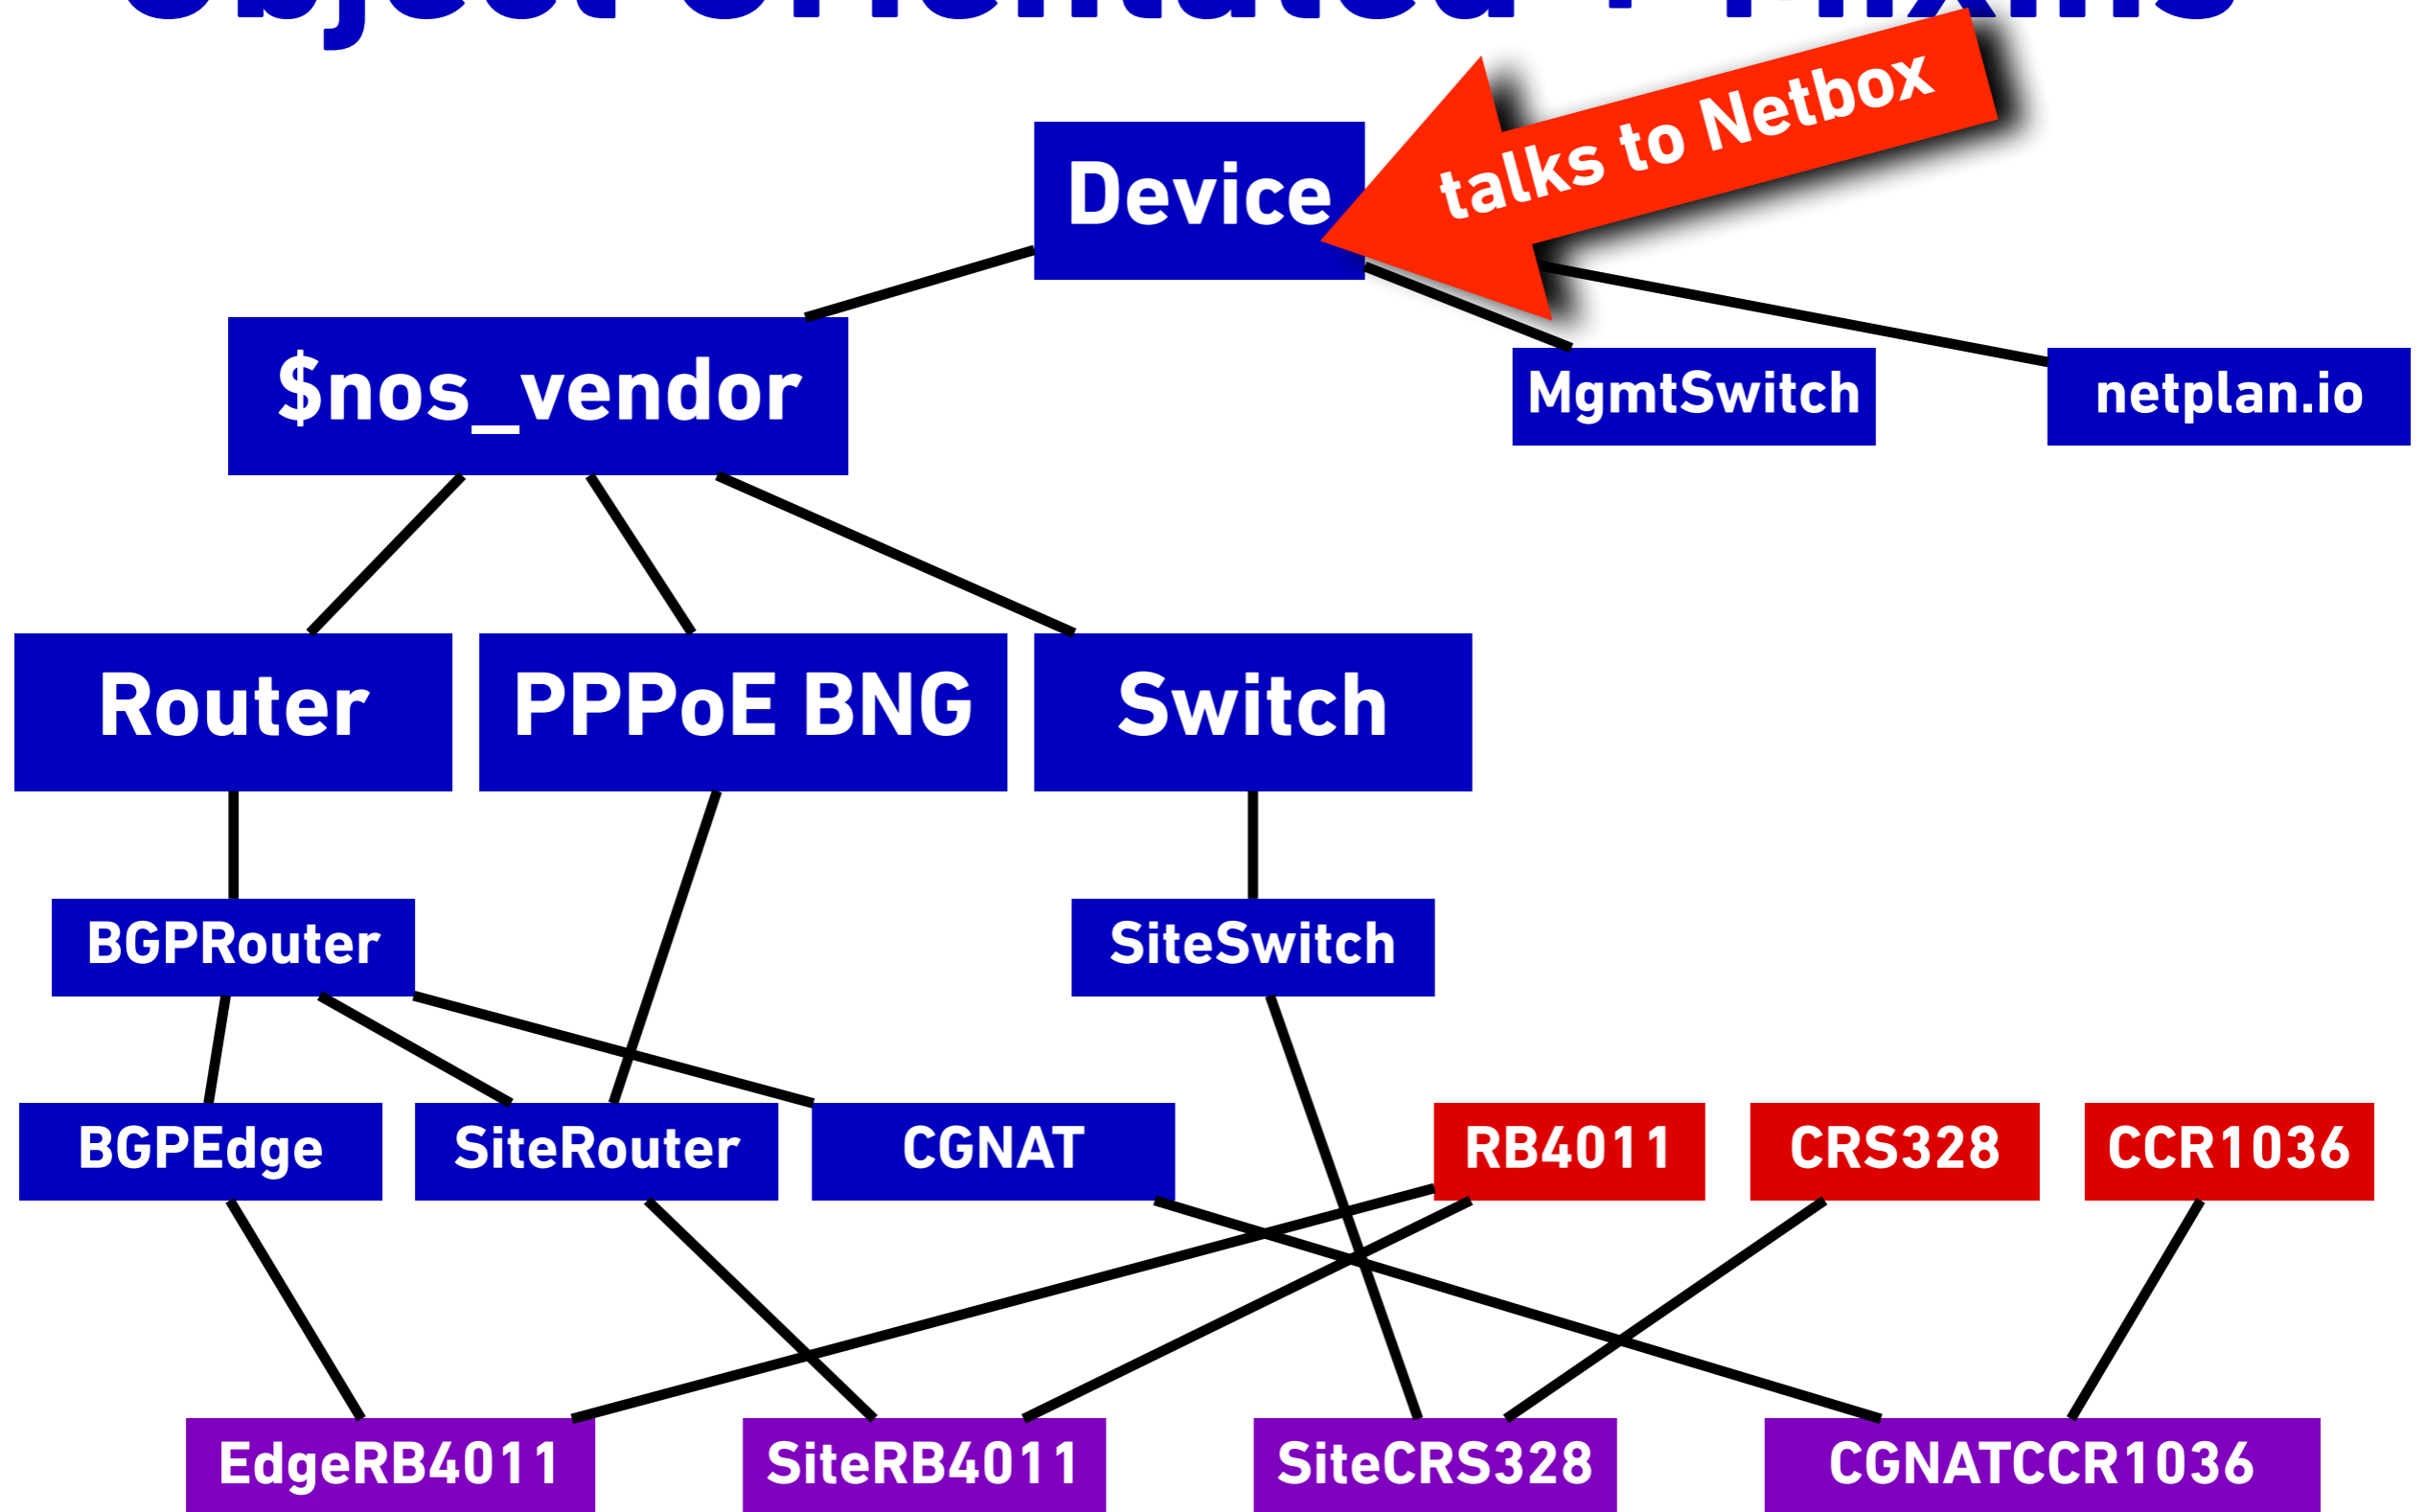

- ✘ Same equipment at every site
  - ✘ Easier for sparing
  - ✘ Easier for automation/configuration
- ✘ Same cabling at every site
  - ✘ Production-line process for pre-build
- ✘ But not every site is identical?
  - ✘ LLD is a component-based template
  - ✘ What moving parts do we need at this site?

# **BUILD: A TYPICAL DAY**

# Grab the Gear (v1)

# Get to Site

# Swear

# Pre-Build, Take Everything

- ✘ Some islands' ferry services are twice per week
  - ✘ Winter timetable has fewer sailings
  - ✘ Bad weather/tide cancellations; also covid
  - ✘ Can send parcels, people, vehicles
  - ✘ Don't be late for your ferry home
- ✘ Islands also served by LoganAir
  - ✘ Popular with tourists (thanks, [Tom Scott](#))
  - ✘ Limited capacity for people and parcels

# Grab the Gear v2

# Connect the Network

# The Most Complicated POP Site

# The Most Complicated POP Site

**ISP: Backbone, Backhaul**

# The Most Complicated POP Site

**5G: User Plane (GTP)**

**5G: RAN (eNB/gNB)**

# Hoist the Radios!

# Aviat Point-to-Point 11GHz

# Connect the CPRIs

# Make 5G

- ❌ Apple won't let SIMs connect to non-encrypted networks
- ❌ Non-commercial, testbed, no ciphers, no iPhones/iPads
- ❌ iPhone has a Lightning-to-Ethernet adaptor connected to CPE/UE

# Leave Site with Big Smile

# 5G FWA: WORTHWHILE?

# Evolution of the G's

- ✘ 2G: able to make phone-calls
- ✘ 3G: mobile access to Internet
- ✘ 4G: mobile video streaming
- ✘ 5G: "Internet of Things"

— Prof. Andy Sutton, BT EE / University of Salford

# Evolution of the G's

- ✘ 2G: able to make phone-calls
- ✘ 3G: mobile access to Internet
- ✘ 4G: mobile video streaming
- ✘ 5G: "Internet of Things"

— Prof. Andy Sutton, BT EE / University of Salford

# Evolution of the G's

- ✘ 2G: able to make phone-calls
- ✘ 3G: mobile access to Internet
- ✘ 4G: mobile video streaming
- ✘ 5G: "Internet of Things"

— Prof. Andy Sutton, BT EE / University of Salford

# Costs of 5G

- ✘ Core (either hosted or self-operated)
- ✘ Increased capex of radios (SDR + BBU)
- ✘ Increased opex of radios (CPU/power usage)
- ✘ Increased cost of CPE compared to 5GHz FWA
- ✘ Spectrum licenses
- ✘ Big Paperwork (GSMA, national regulators, etc)

# Benefits of 5G

- ✘ Mobility (only partially realised in this project)
- ✘ Neutral hosting (revenue share, maybe spectrum)
- ✘ Supports massive number of devices
  - ✘ "Build it and they will come"
- ✘ Fewer vendor interop issues than with 5GHz FWA products...? (e.g. Cambium vs Ubiquiti vs others)
  - ✘ But what channels do your UE devices support?
- ✘ Hype-cycle funding opportunities (until 6G is cool)

# Future of this Project

- ✘ Was initially funded for 6 months, end of March 2022
- ✘ CloudNet continuing to operate, seeking longer-term funding for this 5G trial
- ✘ When you bring  $>1$  Mbit/sec Internet to an area for the first time, users don't immediately have "average utilisation" (no streaming subscriptions)
- ✘ Might transition to "traditional" FWA with 5GHz or light-licensed spectrum instead
- ✘ ...but there are MNOs in discussions, so there is hope!

# Story Isn't Over...

- ❌ New network architecture is mostly deployed
  - ❌ A couple of remaining sites being migrated over
- ❌ How to apply future "patches" to configs?
  - ❌ Vendor's NOS has API; store metadata in config
  - ❌ Query, amend, update version comment/MOTD

# Results

- ✘ Customer performance significantly improved
  - ✘ e.g. one customer went from 6 to 150Mbit/sec
  - ✘ (<1Mbit/sec available from \$national\_incumbent)
- ✘ Network manageability should be simplified
  - ✘ Customer public/CGN IP allocations from RADIUS
- ✘ Loop-free via L3 routing rather than STP
  - ✘ Improved resilience for rain/tide fade, failures

# The Team
